Executive Summary
February 2020
The American City Coalition

Founded in 1994, The American City Coalition (TACC) is a Roxbury-based 501(c)(3) organization committed to providing thought leadership and technical assistance to advance multi-sector and multi-stakeholder partnerships that focus investments to improve the quality of life for Roxbury families.

With Roxbury as a primary focus area, TACC identifies and develops programming and projects that respond to the neighborhood’s assets and needs. TACC’s work is grounded in objective research, in-depth resident input, and the expertise of local stakeholders; this data and analyses allow TACC to help partners identify unmet community needs. Using an emergent approach, TACC seeks to increase collective impact by aligning the skills of partners within defined program areas and identifying and engaging complementary partnerships and resources.

Three interrelated programs guide TACC’s work and reflect the organization’s focus on connecting people to place:

- Resident Supports: Connects residents with the essential services and information needed to support health and mobility;
- Economic Development and Asset Development: Advances strategies that strengthen asset and wealth creation pathways; and
- Neighborhood Vitality: Supports multi-sector partnerships that improve the neighborhood environment and facilitate investment.

Reports, data, and further information can be found at: www.tamcc.org.

TACC acknowledges the following individuals and organizations for their contributions to this study:

Residents, business owners, employees, and property owners who participated in focus groups, surveys, and interviews

Endnotes
Roxbury’s Nubian Square is a diverse neighborhood with a unique multifaceted history that is reflected in its rich cultural assets, the wide-ranging talents of its residents, and the dynamic mix of ethnic, independent businesses that now occupy this business district in the heart of the City of Boston. Within the City of Boston and the Commonwealth as a whole, Nubian Square plays a singular role as the historic center for African American civic, social, and cultural life with a long and varied past as a major commercial center. Nubian Square also features a diversity of households that augurs well for its attractiveness to current and emerging market opportunities.

With the magnitude of development and infrastructure investments in the area, it is not an understatement to say that Nubian Square and Roxbury are at a crossroads. Using research conducted in Fall 2019, the Nubian Square Market Analysis takes an inclusive approach, documenting current conditions and assets (active community resident groups connected through social media; involved and entrepreneurial businesses; gifted visual and performing artists; and active and invested nonprofits), addressing challenges (business development; wealth creation; and physical connections), and identifying opportunities so that the growth of the community’s retail and commercial environment is not left to chance in the face of change.

The American City Coalition (TACC) conducted this study in collaboration with Dudley Square Main Streets, a commercial revitalization organization that provides hands on assistance to businesses in Nubian Square and fosters growth for the next generation of local, minority-owned businesses. TACC contracted the services of the Initiative for a Competitive Inner City (ICIC) and FXM Associates as well as Byrne McKinney & Associates.

To ensure the study encompassed a comprehensive and inclusive approach, including the collection of both quantitative and qualitative data, this report relies on a multitude of primary and secondary data sources. The primary data is largely qualitative and is derived from focus groups of local residents and businesses, surveys of employees, and field notes and interviews of landlords and property owners. These findings are utilized throughout the report to complement and confirm quantitative analyses. The secondary data sources include CoStar Group (business and leasing activity; actual lease comparisons; trends in commercial real estate); City of Boston (parking); United States Census Bureau’s American Community Survey (ACS) five-year data and United States Census Bureau county business patterns; and Esri and Environics Analytics Spotlight (gaps in data from ACS and Census Bureau on demographics; housing; jobs; businesses; and estimates of current conditions and projected demand).
The report utilizes three geographic units of analysis depending on the analysis type: 1) 0.75-mile radius; 2) 1.5-mile radius; and 3) real estate “submarkets” provided by CoStar. These geographic units of analysis are predicated on the idea that people will typically purchase goods and services within the shortest available walking or drive time from where they live.

Since Nubian Square is a unique community and no singular location can be looked to as a comparative or aspirational market, this analysis identified multiple comparison market areas that could provide realistic models and “best practices” for future Nubian Square commercial development. The study uses two types of comparative analysis: 1) Comparative Business Districts: Comparative analyses with the five areas of Ashmont-Fields Corner; Egleston Square; Hyde Square-Jackson Square; Mattapan Square; and Brookline Village are used to place Nubian Square within a context of surrounding business districts and the broader Boston area, to better understand and interpret the data; and 2) Analogous Submarkets: Similarly, both office and retail real estate market analyses are presented for Metro Boston overall and for five submarket geographies of Roxbury/Dorchester; Jamaica Plain/South Suffolk; Longwood Medical Area/Mission Hill/Fenway; South End; and Brookline/Newton.
A. Key Findings

The following are key findings from the study’s quantitative research and associated analyses:

DEMOGRAPHICS

- Nubian Square has a larger concentration of population and households within 0.75 mile and 1.5 miles and therefore a larger local market than the five Comparative Business Districts. These are key factors in generating economic growth and development, but households must also have sufficient disposable income to support local businesses.

- Between 2000 and 2010, Nubian Square grew at a higher rate (25%) than all other Comparative Business Districts as well as the City of Boston as a whole. Since 2010, Nubian Square has had the second highest growth rate, exceeded only by Hyde-Jackson Square. From 2019 to 2024, Nubian Square’s population is projected to grow by 5.5%, exceeded only by Hyde-Jackson and Egleston Squares. The pattern portends expansion of the market opportunity for Nubian Square businesses, especially as the growth is trending towards greater economic diversity than experienced historically.

- Nubian Square’s population has a lower than average percentage of Millennials, age 24 to 44, but a considerably higher percentage of the younger, under age 23, Generation Z population. The current Nubian Square business mix does not respond to the shifting demographic needs which must be recognized for local businesses to optimize their share of growing demand and fully participate in future opportunities.

- The area within 0.75 miles of the Bruce C. Bolling Municipal Building at 2300 Washington Street in Roxbury has the most racially and ethnically diverse population of the five Comparative Business Districts, the vibrancy of its racial and ethnic mix is one of Nubian Square’s competitive advantages.

- Nubian Square has, by far, a higher proportion of households with no vehicle (46%) than the five Comparative Business Districts; additionally, it has the second highest percentage of residents who walk to work or work at home (24%), exceeded only slightly by Brookline Village (25%).

- With 21% of all units built since 2000, Nubian Square has a higher percentage of renters and a newer housing stock than the five Comparative Business Districts.

INCOME

- Nubian Square households have relatively low incomes. The area’s median household income ($41,448) is lower than the median in the Comparative Business Districts ($55,000) and City of Boston as a whole ($69,160).

- As the younger households in the area age and as the wave of larger-scale, new mixed-income residential development now under construction and in the pipeline delivers greater economic diversity to the area, Nubian Square incomes and expenditure potentials are expected to rise, bringing opportunities for a stronger and more vibrant business environment.

BUSINESSES

- Nubian Square has a high percentage of jobs in health, education, and community organizations.¹ This suggests there are a large number of office workers who may be able to support expanded daytime retail and restaurant offerings in Nubian Square.

- Nubian Square has a low share of jobs and few establishments in retail, accommodations, food, arts, entertainment, and recreation-related industries.² In focus groups, residents and employees stated that they want to see growth in these sectors in Nubian Square. However, it is important to highlight these low shares of employment, as growth in these sectors may not happen on its own; sector-specific policy and programmatic support for the growth of these industries may be needed.

¹, ² Source: ICIC analysis of Environics/InfoGroup USA Business Data (2019) and U.S. Census Bureau ZIP Business Patterns (2016).
RETAIL REAL ESTATE

- Retail spending per household is slightly lower than the average of Nubian Square and the five Comparative Business Districts as well as the City of Boston as a whole, reflecting the concentration of younger households and lower median incomes in Nubian Square.

- Much of the commercial space in Nubian Square is characterized as older and in need of modernization. The market area rents are insufficient to support new construction or extensive rehabilitation without subsidy of some sort, including subsidy from higher yielding market rate rental housing. The blighting influence caused by vacant, dilapidated commercial spaces cannot be overstated for its adverse effect on perceptions of overall value.

- On the flip side of these market conditions, the prevailing lower rents offer opportunities for an eclectic mix of small, independent, entrepreneurial businesses designed to bring new energy to Nubian Square; most of these businesses will need financial assistance for real estate and business start-up/expansion, as well as cooperation from landlords who see the long-term value of expanded and revitalized retail/restaurant activity to their properties notwithstanding lower initial rents.

RETAIL SPENDING OPPORTUNITIES

- A retail opportunity/gap analysis identified immediate opportunities to significantly expand existing business sales and/or potential absorption of over 80,000 square feet of retail and restaurant uses based on sales leakage within a 1.5-miles radius of Nubian Square.

- Based on current sales leakages, business opportunities include limited service restaurants and buffets; health and personal care; hobby, toy, and game; hardware; and specialty stores such as meat markets, gift/novelties, and garden centers. The retail opportunity/gap analysis does not mean there is no opportunity for growth or improvement outside of these business types, especially for restaurants and entertainment which are expected to draw patrons from outside the local market area.
The market analysis led to specific, implementable policies and strategies to realizing residents’, business owners’, and employees’ shared vision: Enliven the Nubian Square Business District for both residents and visitors during the evenings and weekends and support a mixed-use, urban lifestyle environment.

As previously mentioned, with the magnitude of development and infrastructure investments in the area, it is not an understatement to say that Nubian Square and Roxbury are at a crossroads. This study takes an inclusive approach, documenting current conditions and assets, addressing challenges, and identifying opportunities so that the growth of the community’s retail and commercial environment is not left to chance in the face of change.

The seven recommendations listed below are a strategic path to realizing the collective vision for the Nubian Square Business District. Informed by current local data, the recommendations address underlying conditions of safety and four core elements requisite to vitality that were adapted from the Main Street America Transformation Strategies approach: economic conditions, placemaking, marketing, and organizational capacity. While many of the recommendations could be implemented in silos, this could work at cross purposes to a more holistic and robust revitalization of Nubian Square. To increase Nubian Square Business District’s vitality, the community will need to work collectively with sustained focus and a well-coordinated implementation approach to address these elements.

**Overarching Recommendations to Support Safety and Organizational Capacity**

Safety and the reactivation of Dudley Square Main Streets are overarching themes that run throughout all of the study’s recommendations. These two themes emerged out of every segment of the study’s research and are palpable in: the shopping pattern of residents for whom Centre Street in Jamaica Plain, not Nubian Square, is the preferred destination due to the mix of shopping options, the availability of parking, and the quality of goods/services; and the concerns of residents and business owners who identify the perceptions of safety and the need for significant streetscape and private property improvements as challenges.

1. **Improve perceptions of safety in Nubian Square.**
   
   Residents and business owners alike mention safety as a concern in Nubian Square, particularly at night. Although this study does not analyze crime data on Nubian Square and the Comparative Business Districts, the pervasiveness of the perception is sufficient to motivate the need for change. Residents and business owners do not see the presence of a parked police cruiser with its flashing blue lights as a deterrent to undesired activities. Instead, they view it as a warning to residents and visitors of a potential safety or health emergency in the Square and a signal that people should avoid the area. The cruiser also provides a clear indication of where police are not, as well as where they are, encouraging any undesirable activities to occur elsewhere in the Square. Residents and business owners recommend replacing the cruiser with active police foot patrols, which not only add to the sense of safety but also provide opportunities for positive police interaction with the members of the community. Additionally, improved street lighting and street activities that bring increased foot and vehicular traffic into the Square in the evening were seen as enhancing the sense of safety.

2. **Reactivate Dudley Square Main Streets as the driver of programs and activities.**

   Dudley Square Main Streets continues to have a critical and unique role to play in the revitalization of Nubian Square. A focus on Nubian Square Business District marketing and advocacy is as vital as working with prospective and existing businesses. Actively working with the City of Boston’s Office of Economic Development, an adequately staffed Main Street program can: broker positive outcomes between existing and prospective businesses and landlords; expand activities to bring residents and visitors into the district, such as special and regularly recurring events; and continue to expand business capacity building in terms of workshop series and hands-on business assistance to improve business operations. Main Streets should take advantage of the specific opportunities identified in this study to recruit prospective new businesses and, more importantly, provide objective evidence to support marketing and financing for expansion of existing businesses and retail space.
**Additional Recommendations to Support Economic Conditions, Placemaking, and Marketing**

Five additional recommendations are important components of the strategic path toward the collective vision of Nubian Square:

A. **Preserve and expand on core retail, such as convenience goods and the day-time lunch trade.** The data indicates that Nubian Square ranks fourth among the six Comparative Business Districts in the number of retail establishments. Focus group participants and an inventory of businesses also indicate that Nubian Square has a dearth of local services such as dry cleaning, shoe repair, yoga/fitness, and pet care/grooming that does not meet the needs of residents and employees of local businesses. Residents are already purchasing these services but travel outside of the Nubian Square Business District to Washington Mall, Grove Hall, and especially to Jamaica Plain to do so. These types of small businesses are an ideal fit for Nubian Square.

B. **Expand and attract more destination-driven entertainment/dining options.** Of the Comparative Business Districts, Nubian Square has the largest population within a 0.75-mile radius, also making it the densest. Its diverse population is by far the youngest, and it has the largest population under the age of 44. These characteristics, together with Nubian Square’s transit advantages, hold a competitive advantage for a vibrant urban entertainment environment. Yet Nubian Square lags Egleston Square, Ashmont-Fields Corner, and Brookline Village in the number of Arts, Entertainment, and Recreation establishments as well as the in the number of Accommodation and Food Services (mostly restaurants) establishments. Focus group participants of all ages identified the need for destination-driven entertainment/dining options.

C. **Recognize and capitalize on trends toward a younger and more diverse population.** Among the retail uses in demand by younger residents and the diversity of the residents are: health and personal care; hobby, toy, and games; and limited-service restaurants. To complement the business activity, both residents and businesses expressed the desire for special events on the weekends and in the evenings which would draw young people and families to the Square including concerts, farmers’ markets, book fairs, and a variety of ethnic pop-up retail and events.

This recommendation also includes a strategy to minimize the “creep” of retail businesses along Warren Street and Washington Street in order to reinforce the core of Nubian Square as the shopping district.

### Retail Opportunities
- Health and personal care store
- Hobby, toy, and game store
- Clothing store
- Specialty store
- Hardware store
- Housewares store
- Other general merchandise stores, including those with an Afrocentric orientation
- Limited-service restaurants
- Sit-down restaurants, especially those with entertainment

### Service Opportunities
- Dry cleaner service
- Shoe repair service
- Other locally-oriented services, including those with an Afrocentric orientation
- Yoga/fitness studios
- Pet care/grooming

### Events Opportunities
- Outdoor concerts
- Farmers’ market
- Book fairs
- Ethnic pop-up retail and events
- Cultural events
- Themed experiences: e.g. First Thursdays
D. Recruit an eclectic mix of independent, entrepreneurial businesses designed to bring new energy to Nubian Square. Property owners must be engaged to support such efforts for long-term gains in value. As noted earlier, one of the potential growth sectors identified in the retail gap analysis is “other general merchandise” which includes: specialty stores, hardware, housewares, clothing—in other words, a mix of products for smaller niche, independent businesses. In focus groups, residents recommended expanding on Nubian Square’s existing Afrocentric niche.

The documented potential growth sectors must be actively promoted to current Nubian Square businesses to increase sales. In addition, to expand the mix of businesses, a top priority should be the marketing of these potential growth sectors to targeted, successful businesses currently located outside of the Square that might be recruited for expansion of their businesses to Nubian Square. However, most of these businesses will need financing assistance for real estate and business start-up/expansion. Specifically excluded are warehouse clubs and superstores, which do not fit residents’ and business owners’ vision for Nubian Square.

4 Promote increased office space development, particularly above street level.

Businesses and nonprofits with primarily office functions have a high share of employment in Nubian Square and those that currently utilize ground floor space might find upper floor space more attractive if it were suitably developed. This would free-up more first floor space for retail and related uses. In addition, increased upper floor office space development could support expansion of office-using industries in the Square; with Class A³ office space at a premium in the City of Boston, increasing the inventory will meet any demand, particularly from proximate clusters⁴ such as Healthcare and Biotechnology associated with Boston Medical Center. Coworking spaces, which do not necessarily require significant upgrades to existing spaces, may also be viable for upper floor spaces, taking advantage of the superior public transportation accessibility as well as the Square’s relatively low rents.

5 Increase market rate residential development while preserving existing affordable housing.

The current mix of housing in Nubian Square is heavily skewed to low- and moderate-income housing, which is critically needed in Boston’s housing market. Nevertheless, neighborhoods such as Nubian Square are home to a disproportionate share of lower-income residents whose incomes cannot support the number and variety of retail businesses desired by residents overall. Additionally, the area’s low household income limits the ability of local residents by themselves to support the higher rents that would be charged to retailers for renovated space or new construction.

Increased local market rate housing would be beneficial to help achieve the desired retail balance in Nubian Square. Based on market demand, market rate housing is supportable and will help achieve feasibility for development projects whose program and goals can include affordable, as well as market rate housing, and expanded retail activity. The current “one third/one third/one third” formula used in recent procurements in Nubian Square does not support a robust retail mix and should be revised to allow for 50% market rate housing. At the same time, Nubian Square’s existing affordable housing must be preserved so that low- and moderate-income residents can continue to live in a centrally located, transit-accessible neighborhood and share in the benefits of revitalization. More affordable housing also needs to be built in other centrally located and transit-accessible neighborhoods in the City of Boston and elsewhere in Metro Boston.

³ Most prestigious buildings competing for premier office users with rents above average for the area. Buildings have high-quality standard finishes, state of the art systems, exceptional accessibility, and a definite market presence.

⁴ Clusters are groups of closely related and interconnected businesses that operate within a specific geography and benefit from their geographic proximity.
Improve the public realm and shared amenities. Many of the public realm and amenity elements that make for a successful business district are either missing or in short supply in Nubian Square. When residents spoke about the reasons they shopped in other districts, they cited a comfortable pedestrian environment, one with shade trees, seating options, proximity to parking, ease and sense of safety crossing the street, and clear signage. The following recommendations respond to the areas public realm and amenities needs:

A. Significantly improve the MBTA’s investment in Nubian Station and in Nubian Square. Residents and business owners view the MBTA’s Nubian Station as a source and significant contributor to the general sense of disinvestment in Nubian Square. It contributes to the negative perceptions of the Square through the general neglect, and lack of basic maintenance and upgrades. The maintenance of MBTA bus stops are also a concern: for example, the stop at the gateway to Nubian Square and the Roxbury community at the intersection of Melnea Cass Boulevard and Washington Street is not cleaned; and the stop at the intersection of Ruggles Street and Washington Street has been missing a pane for the past year. The lack of maintenance and upgrades affects the quality of life of residents, businesses, and commuters. It reduces confidence in the MBTA and is evident when compared to the maintenance and upkeep of the covered bus stops in Downtown Boston, the South End, and Jamaica Plain.

B. Develop a parking strategy. This study’s parking analysis and the comments of both residents and businesses identify a need for additional parking. There are few public parking spaces available for Nubian Square visitors. There is additional pressure related to proposed future developments in the area that could further limit access to public parking. In focus groups, residents and business owners highlighted their increasing frustration with access to parking and their concerns about the impact of future development on an already inadequate parking system. Suggested interim measures to improve parking include providing access to the Blair lot from Washington Street and designating a location for business employees to park in order to minimize the long-term utilization of street parking.

C. Eliminate “blighted” properties and facades. There has been strong public investment in the area, including the construction of the Bruce C. Bolling Municipal Building, the upgrade of Dudley Street, and the anticipated reopening of the renovated Dudley Branch of the Boston Public Library. Nubian Square is also home to many businesses and property owners who have a strong sense of civic pride which is manifested in the high level of maintenance and cleanliness of their own storefronts as well as the cleaning and sweeping of sidewalks adjacent to their businesses.

However, some property owners with vacant storefronts do not provide adequate maintenance. The property at the former Edison building at the intersection of Warren Street, Dudley Street, and Harrison Avenue, as well as the Dartmouth Hotel Apartments, 2255 Washington Street, and 2219 Washington Street are all prime examples of poorly maintained properties. In addition to maintenance, the use of solid roll-up grates destabilize the business district sending a message that the area is unsafe, and a place of disinvestment and urban decay. These properties require an unprecedented level of scrutiny by the City of Boston to assist Nubian Square in making the necessary strides toward strengthening the business district, increasing businesses profitability, and branding the district as a strong and welcoming gateway to the Roxbury community.

D. Develop a streetscape, lighting, and signage program. In addition to the “blighted” properties, focus group participants highlight their concern that other storefronts have signage that is outdated and inappropriate and in need of an upgrade. Traffic calming measures are also necessary particularly for the higher-speed arteries such as Warren Street, where fast-moving traffic inhibits pedestrians from crossing and reduces access to businesses. Street furniture that provides residents and visitors comfortable places to sit as well as other amenities will help to reinforce the streets as a place. Additionally, current wayfinding signage is inadequate; business owners identify the need for wayfinding signage to public parking lots and to key buildings and sites to increase connectivity.
Implement a well-designed and coordinated Nubian Square marketing strategy.

Nubian Square has strong, but unrealized assets that need to be leveraged in order to build an authentic brand identity that is rooted in the Square’s:

- History as an entertainment and dining hub for the City of Boston;
- Abundance of cultural, racial, and ethnic diversity, grounded in but not limited to its historic Afrocentric identity, which makes it a welcoming environment for residents and visitors alike;
- Progressive, influencer-driven outlook with pop-ups and curated brands that demonstrate that Nubian Square is “not your grandmother’s shopping district;” and
- Eclectic mix of independent, entrepreneurial operators in an environment where rents are low enough to allow experimentation and dynamic change.

This branding should be supported by a well-design and coordinated marketing strategy that includes special events, seasonal themes, cultural history, and collateral material aimed at Roxbury neighborhood residents, local visitors, conventioneers, and tourists. Though initial steps have been taken, this branding and marketing needs to be expanded and should include a strong online presence which is carried on all local business websites.

C. Conclusion

The recommendations set forth in the Nubian Square Market Analysis were not developed in isolation and must be implemented using a multifaceted approach that is carefully coordinated with planned public and private investment in Nubian Square.

Over the next five years, the City of Boston will be investing $12 million in street and sidewalk reconstruction along Washington Street and Warren Street in Nubian Square. Together with the construction at 135 Dudley Street (former B2 Police Station site), 2147 Washington Street, and 40-50 Warren Street, the resulting impact of these projects on traffic, construction equipment, closed/narrowed sidewalks, and limited parking may create a state of upheaval and turmoil in Nubian Square that increases pressures on existing businesses.

These recommendations and the construction impacts on businesses highlight both the need for a multifaceted approach to the revitalization of Nubian Square and a strong advocate to shepherd the implementation of the recommendations over the short- and long-term.

The City of Boston’s Office of Economic Development can play a vital and pivotal role in fully strengthening Nubian Square’s retail and commercial environment. With its proven organizational capacity, the Office of Economic Development should be the active and fully present managing entity, addressing the core elements of safety, economic conditions, and marketing and coordinating all public activities in Nubian Square by:

- Coordinating the MBTA Police and Boston Police to increase both the sense and perception of safety in Nubian Station and in Nubian Square; and the complete and thorough upgrade of Nubian Station, opened in 1993;
- Marketing the Square both within the City of Boston but also to regional visitors, conventioneers, and tourists;
- Working aggressively to understand which small businesses in other business districts are ready to expand and for which the diversity and eclectic mix in Nubian Square would be an asset; and
- Giving “blighted” properties an unprecedented level of scrutiny to eliminate the effects their current conditions have on Nubian Square.

Nubian Square and Roxbury as a whole abound with assets which need to be acknowledged and celebrated in both the business offerings and community events in the Square. The Nubian Square Market Analysis identifies the foundational aspects that can assist in the rejuvenation of Nubian Square.

The full report includes eleven chapters that document the community’s demographics; current Nubian Square businesses; the commercial real estate market; retail spending opportunities; the public realm, parking and safety; as well as supporting data. To download the Nubian Square Market Analysis, visit www.tamcc.org.
II. Introduction and Background

Roxbury’s Nubian Square is a diverse neighborhood with a unique multifaceted history that is reflected in its rich cultural assets, the wide-ranging talents of its residents, and its dynamic mix of ethnic, independent businesses that now occupy this business district in the heart of the City of Boston. Within the City of Boston and the Commonwealth as a whole, Nubian Square plays a singular role as the historic center for African-American civic, social, and cultural life with a long and varied past as a major commercial center. Nubian Square also features a diversity of households that augurs well for its attractiveness to current and emerging market opportunities.

The Nubian Square Market Analysis compiles and analyzes: current data on Nubian Square’s demographic and economic profile with a focus on its retail and other commercial markets; corresponding data on nearby comparative businesses districts; and input from local residents, businesses, and community stakeholders. The analyses estimate current and potential demand for retail activity and inform a set of actionable recommendations that support the goal of fulfilling Nubian Square’s potential as a unique, special, and diverse place by showcasing it as the “Heart & Soul of Roxbury” and the historical Black and minority community in Boston and the Commonwealth of Massachusetts.

During the mid-nineteenth century, an expanded trolley car system and elevated rail line helped the commercial center of Nubian Square (previously Dudley Square) flourish. By the early-twentieth century, the Square was a vital retail center with movie theaters, a bowling alley, and department stores; Ferdinand’s, the largest furniture store in New England, anchored the Square and attracted shoppers from around the region. The demolition of the elevated train service to Nubian Square in the 1980s together with larger macro-demographic shifts and policies of urban renewal targeting black/brown and low-income communities have meant that the Square has struggled to match the height of commercial success in the early-twentieth century.

Today, Nubian Square is a diverse community based on race, ethnicity, and language and remains an active transportation hub; over 43,000 passengers travel through the Nubian Station Massachusetts Bay Transportation Authority (MBTA) bus terminal daily.¹ Public investment restored and redeveloped the long-vacant Ferdinand Building into the Bruce C. Bolling Municipal Building as the headquarters of Boston Public Schools with ground-floor retail space at a cost of $120 million. The pace of private investment has increased. In 2019, the 130 room Residence Inn by Marriott opened and reports a 90% occupancy; the Franklin Institute of Technology announced plans to move its campus to Nubian Square, constructing a new building to support both administrative staff and programs. Within the next five years, over 80,000 square feet of retail space will be completed and occupied within Nubian Square and this number does not
include square footage from the city owned parcels (Blair Lot and Nawn Factory) currently in the
developer selection process.

With the magnitude of development and infrastructure investments in the area, it is not an
understatement to say that Nubian Square and Roxbury are at a crossroads. This analysis takes an
inclusive approach, documenting current conditions and assets (active community resident
groups connected through social media; involved and entrepreneurial businesses; gifted visual
and performing artists; and active and invested nonprofits), addressing challenges (business
development; wealth creation; and physical connections), and identifying opportunities so that
the community’s retail and commercial environment is not left to chance in the face of change.

The community faces a range of urgent challenges:

- Business Development: Nubian Square has a dynamic mix of 197 ethnic and culturally diverse
  businesses. Thirty percent of businesses are immigrant-owned, including restaurateurs from
  Somalia and Nigeria. Although there are strong, long-term businesses, Nubian Square has
  seen an increase in vacancies. These create the impression of a business district in distress.
  Additionally, in focus groups: businesses have reported Saturdays as a slow day, unlike other
  business districts which report increased Saturday sales; residents indicate a need for regular,
  quality, predictable activity in a safe environment to draw them and their families into Nubian
  Square.

- Physical Connections: The Nubian Square Business District as well as the abutting John Eliot
  Square Historic District hold a unique history and culture; however, these assets are not
  being leveraged to draw shoppers into the business district. While the Commonwealth’s
  recent investment in the Roxbury Heritage State Park and the newly opened Residence Inn by
  Marriott are attracting new visitors and 43,000 daily passengers pass through Nubian Station,
  few visitors or residents walk through Nubian Square to shop. Little to no weekend or
  evening activity contributes to the perception of Nubian Square being a dormant business
  district.

Even in the face of documented challenges, Nubian Square has the potential to become a strong
business district; Nubian Square Market Analysis presents recommendations for viable,
implementable, and specific retail and commercial uses that will enliven Nubian Square and
support a mixed-use, urban lifestyle that supports Roxbury residents, expands its regional draw,
and continues to reinforce Roxbury as a historic and cultural destination.

The American City Coalition (TACC) conducted this analysis in collaboration with Dudley Square
Main Streets (DSMS), a commercial revitalization organization that provides hands on assistance
to businesses in Nubian Square and fosters growth for the next generation of local, minority-
owned businesses. TACC contracted the services of the Initiative for a Competitive Inner City
(ICIC) and FXM Associates (FXM). ICIC is a national nonprofit research and advisory organization
based in Roxbury with a mission to drive economic prosperity in America’s cities through private
sector investment to create jobs, income, and wealth for local residents. FXM is a consulting firm specializing in economic development planning, including the revitalization of older commercial districts. FXM engaged Byrne McKinney & Associates, a specialized real estate consulting firm based in Boston.

The goals of the *Nubian Square Market Analysis* are to: 1) identify factors that distinguish Nubian Square as a location capable of attracting and sustaining businesses that will increase the vibrancy as a retail center; 2) recommend specific initiatives and strategies that can increase Nubian Square’s vitality as both Roxbury’s commercial hub and one of Boston’s major community business districts; and 3) inform the discussion that will help recalibrate the conversation about the Square’s commercial growth.

This analysis includes objective information and implementation strategies relevant to a range of stakeholders so existing businesses looking to expand and businesses intending to locate in Nubian Square are aware of economic and cultural variables; landlords and retail recruiters will understand how commercial rents compare to those in other markets and the impact rental rates have on the community; and policymakers, residents, and Main Streets have strategies to market the district to businesses ready for expansion into an ethnically and racially diverse community.
III. Methodology

To ensure the study encompassed a comprehensive and inclusive approach, a variety of data sources and analytic methods were employed. These included the collection and analysis of both quantitative and qualitative data through surveys, field notes, focus groups, and relevant other secondary source data.

This methodology stems from the need to respond to four driving research questions:
1. What is the existing and potential retail demand in Nubian Square based on spending of surrounding residents and employees?
2. What are the strengths and weaknesses of the existing business mix of Nubian Square?
3. What factors make a strong, sustainable business district within the surrounding areas?
4. How can these findings be implemented for Nubian Square in the near- and long-term?

A. Data Sources

This report includes both quantitative and qualitative data, and relied on a multitude of primary and secondary data sources. The primary data are largely qualitative and are derived from:
- focus groups of local residents and businesses;
- surveys of employees; and
- field notes and interviews with landlords and property owners.

These findings are utilized throughout the report to complement and confirm quantitative analyses. The secondary data sources include Esri, Environics Analytics Spotlight Reports, CoStar Group, Claritas Pop-Facts Premier, the City of Boston, United States Census Bureau’s American Community Survey (ACS) five-year data, and United States Census Bureau county business patterns. CoStar Group data centers on business and leasing activity, collecting information on actual lease comparisons and trends in commercial real estate. The City of Boston data provided an overview of parking in Nubian Square. Esri, Environics Analytics, and Claritas data complement gaps in data from the five-year ACS/U.S. Census Bureau on demographics, housing, jobs, businesses, and estimates of current conditions and projected demand.

B. Geographic Definitions

The report utilizes three geographic units of analysis depending on the analysis type: 1) 0.75-mile radius; 2) 1.5-miles radius; and 3) real estate “submarkets” provided by the CoStar Group. These geographic units of analysis are predicated on the idea that people will typically purchase goods and services within the shortest available walking or drive time from where they live. Retailers generally define market areas in terms of drive times, with a 15-minute drive time considered the maximum time consumers would be willing to drive for all but the largest stores and store types.
Radii: 0.75 Mile and 1.5 Miles
Due to the nature of the (mostly small) businesses in Nubian Square, the density of population in the area, and the proximity of other Comparative Business Districts, an area described by circles within 0.75 mile and 1.5-miles radii capture the Square’s business activities. The 0.75-mile radius is also the well-recognized customer walk zone, while 1.5 miles represents a secondary, but still important, local market area for residents traveling for goods and services by car or transit. For Nubian Square, the Bruce C. Bolling Municipal Building located at 2300 Washington Street defines the center of the radii. Figure 3.1 shows the 0.75- and 1.5-mile radii. Unless otherwise stated, the report analysis is based on the 0.75-mile radius.

Figure 3.1: 0.75-Mile and 1.5-Miles Radii from the Bruce C. Bolling Municipal Building

Submarkets
The “submarket” geographies supplied by the CoStar Group provide a broader unit of analysis to nest Nubian Square in the context of the Roxbury-Dorchester real estate submarket. CoStar’s submarkets utilize geographic definitions that real estate brokers typically use and provide specific data such as current and historical absorption, vacancies, and market rents.

C. Comparative Analyses
Since Nubian Square is a unique community and no singular location can be looked to as a comparative or aspirational market, the Nubian Square Market Analysis identifies multiple comparison market areas that could provide realistic models and “best practices” for future Nubian Square commercial development: 1) Comparative Business Districts; and 2) Analogous
Submarkets that cover a larger land area and help to inform an understanding of retail and office trends.

**Comparative Business Districts**

Rather than simply describing Nubian Square’s demographic and business characteristics, comparative analyses are used to place Nubian Square within a context of surrounding business districts and the broader Boston area, to better understand and interpret the data. These five comparison areas are:

- Ashmont-Fields Corner;
- Egleston Square;
- Hyde Square-Jackson Square;
- Mattapan Square; and
- Brookline Village.

The geographic definitions for the Comparative Business Districts parallel the 0.75 and 1.5 mile definitions used for Nubian Square. In the others, MBTA station locations were used as center points.

**Analogous Submarkets**

Similarly, real estate assessments are undertaken for each of the commercial submarkets, defined to capture the competitive perspective of real estate owners and tenants, rather than the perspective of retail consumers/customers (the district walk-zone). To this end, both office and retail real estate market analyses are presented for Metro Boston overall and for the following Analogous Submarket geographies defined by CoStar for use by brokers and other real estate professionals:

- Roxbury/Dorchester;
- Jamaica Plain/South Suffolk;
- Longwood Medical Area/Mission Hill/Fenway;
- South End; and
- Brookline/Newton.

**D. Focus Groups, Surveys, and Stakeholder Interviews**

To supplement the quantitative market analyses, the report utilizes findings from a number of semi-structured focus groups, formal surveys of employees, and key stakeholder interviews. This provided an opportunity to both ground and test any quantitative discoveries in the lived experiences of the community. These qualitative findings are interwoven throughout the *Nubian Square Market Analysis* to complement the respective section. See Appendix A for a full overview of focus group themes and findings, as well as the survey questions distributed to employees.

**Resident Focus Groups**

Two focus group sessions were held with 10 Roxbury residents on the evenings of October 29 and
November 6, 2019; through questions and conversations, the focus groups sought to shed light on residents’ current use of Nubian Square, their perceptions of assets and issues, and potential strategies to ameliorate the issues. Participants ranged in age from 25 to 75 year olds; were both renters and owners of their homes in Roxbury; and one participant has lived in Roxbury for 75 years.

**Business Focus Groups**

Two business focus groups were held on the mornings of October 30 and November 6, 2019 for a total of eight participants. To ensure a holistic conversation, a range of local Nubian Square business owners were recruited and included restaurants, clothing stores, food services, as well as general retail. These sessions sought similar insights as the resident focus groups. In addition, questions were added to understand perceptions of the leasing environment, employee recruitment, and barriers/opportunities for expansion.

**Surveys**

A survey was conducted to understand the reasons why local employees choose to/choose not to patronize Nubian Square businesses, understand their consumer preferences, and their perceptions and visions of Nubian Square’s commercial/retail offerings. Over 20 surveys were conducted using SurveyGizmo and were distributed to local employees working in Nubian Square. Respondents were primarily from governmental offices, nonprofit organizations, retail, and other sectors of employment that exist with the Square. Fifty percent of employees surveyed were also Roxbury residents.

**Interviews**

Phone interviews were conducted with Nubian Square landlords (including the two community development corporations) and Main Street managers from Comparative Business Districts to understand the rental price points, the types of businesses interested in locating in their business districts, and the specific strategies used to attract and retain businesses.

**Study Limitations**

While some survey responses from employees were conducted in person and on location, several were reported through snowball sampling of employees sending out the survey to other employees. All responses are not verified by other means. Lastly, data from the CoStar Group around vacancy rates does not include those vacancies where unoccupied space is not marketed for lease.
## IV. Demographics and Income

Understanding the demographics and income of residents can help inform the types of retail and related businesses that can best meet the needs of current residents and identify Nubian Square’s competitive features. Demographic and income data sources included Claritas Pop-Facts Premier (2019 Current Year Estimates), Esri Community Profile (Nubian Square), Esri Detailed Age Profile (Nubian Square), Esri Disposable Income Profile (Nubian Square), and Esri Retail Demand Outlook (Nubian Square).

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Statistics</th>

</thead>
<tbody>
<tr>
<td>Age</td>
<td>Nubian Square has the youngest population of the six Comparative Business Districts.</td>
</tr>
<tr>
<td></td>
<td>• Nubian Square is home to 39,714 residents, while the average population of the six areas studied is 34,516.</td>
</tr>
<tr>
<td></td>
<td>• The population is also growing and is anticipated to increase by 11.6% by 2024.</td>
</tr>
<tr>
<td></td>
<td>• There are 22,474 residents per square mile in Nubian Square.</td>
</tr>
<tr>
<td></td>
<td>• The median age of residents in Nubian Square is 29 years old; younger than the median age of the Comparative Business Districts (35 years old).</td>
</tr>
<tr>
<td></td>
<td>• The median age of Nubian Square is projected to remain the same through 2024.</td>
</tr>
<tr>
<td>Race and Ethnicity</td>
<td>Nubian Square is racially and ethnically diverse. This is one of Nubian Square’s most competitive features and future plans for the Square must preserve and strengthen this diversity.</td>
</tr>
<tr>
<td></td>
<td>• Black (not Hispanic or Latinx) residents make up the largest share of Nubian Square’s population.</td>
</tr>
<tr>
<td></td>
<td>• The Black population share is much higher in Nubian Square (41.8%) than in the City of Boston as a whole (24.0%).</td>
</tr>
<tr>
<td></td>
<td>• Nubian Square is also home to a large Hispanic or Latinx population (22%) as compared to the City of Boston as a whole (19%).</td>
</tr>
<tr>
<td>Income</td>
<td>Economic well-being, as measured by the poverty rate, the unemployment rate, and median household income is lower in Nubian Square than in Boston as a whole.</td>
</tr>
<tr>
<td></td>
<td>• Median household incomes for Nubian Square are over $27,000 less than both the City of Boston as a whole and Comparative Business Districts.</td>
</tr>
<tr>
<td></td>
<td>• Average discretionary income, measured as income after taxes and essential expenses such as rent, utilities, and healthcare costs, is currently just over $29,000 per resident.</td>
</tr>
<tr>
<td></td>
<td>• The poverty rate is about 50% higher in Nubian Square than in Boston as a whole.</td>
</tr>
<tr>
<td>Educational Attainment</td>
<td>Educational attainment is lower than in Boston as a whole; fewer residents have high school diplomas.</td>
</tr>
<tr>
<td></td>
<td>• Educational attainment (age 25+) is lower in Nubian Square than in Boston as a whole.</td>
</tr>
<tr>
<td></td>
<td>• The percentage of population with less than a high school diploma is higher in Nubian Square compared to Boston.</td>
</tr>
<tr>
<td></td>
<td>• The percentage of residents with bachelor’s degrees is only slightly lower than in Boston as a whole.</td>
</tr>
</tbody>
</table>
Nubian Square incomes are expected to rise, creating opportunities for a stronger and more vibrant business environment. Median household incomes are projected to grow 22% by 2024. With higher projected household incomes, as well as population growth, comes greater potential spending power from local residents to support Nubian Square’s future retail and service offerings.
V. Nubian Square Businesses

Employment and the makeup of businesses and business activities currently in Nubian Square are an important component of this market analysis. The relative concentration of employment in Nubian Square by industry as compared to the City of Boston as a whole and Comparative Business Districts, as well as the connectedness or clustering of interconnected businesses, sheds light on Nubian Square’s competitive advantage.

A. Business Clusters and Employment

Clusters are groups of closely related and interconnected businesses that operate within a specific geography and benefit from their geographic proximity. The companies operating within a cluster are connected by a shared workforce, supply chains, and technologies. Clusters can have a significant impact on the survival and growth of small businesses\(^3\),\(^4\) and well-designed cluster development strategies can further stimulate startups and job growth.\(^5\),\(^6\)

Clusters in a particular geographic area are those activities in which that area specializes. Clusters are measured using a location quotient (LQ) which is calculated as the cluster’s share of total employment in Nubian Square divided by its share of employment in the City of Boston as a whole.

- Very strong clusters are those with a LQ greater than 1.5;
- Strong clusters are those with a LQ greater than 1 but less than 1.5; and
- Activities with a LQ less than 1 are not considered a cluster as there are fewer jobs than in the city as a whole and thus not currently an area of specialization.

Very strong and strong clusters are critical to identify as they point to Nubian Square’s competitive advantages as compared to other geographic locations. For purposes of this analysis, Nubian Square is defined as the area within a 0.75-mile radius of the Bruce C. Bolling Municipal Building, located at 2300 Washington Street.

Table 5.1 provides a list of Nubian Square’s very strong and strong clusters and are those industries that make up a higher percentage of total employment in the Square than in the City of Boston as a whole with a LQ greater than 1.0.

Concentration of Employment

Nubian Square has a high percentage of jobs in health, education, and community organizations and a low percentage in retail, hospitality, arts, entertainment, and related industries.

Nubian Square has several industries with higher shares of employment than in the City of Boston as a whole. The share of employment in private elementary and secondary schools and job training services is over 1,600 percent higher than in the city as a whole. The share of employment in health-related industries (including hospitals, clinics, and biopharmaceuticals) is also very high in Nubian Square. This high percentage of employment may be due to the fact that Nubian Square is defined as including parts of Boston Medical Center and the Boston University Medical Campus. The high share of employment in these industries suggests there are a large number of office workers who may be able to support expanded daytime retail and restaurant offerings in Nubian Square.

Nubian Square has a much lower percentage of employment in retail, restaurants, and hospitality businesses than the City of Boston as a whole. The share of employment in retail businesses in Nubian is 27% lower than in the city as a whole. The percentage of Nubian’s employment in restaurants and hospitality establishments is about half that of the city as a whole. Nubian Square also has a lower percentage of employment in arts and entertainment-related industries than the city as a whole. Nubian’s share of employment in performing arts-related businesses is 32% lower than the citywide share. Employment in entertainment and media-related businesses is 18% that of the city as a whole.
Because in focus groups residents and employees identified these sectors as ones they wanted to see grow in Nubian Square, it is important to highlight these low shares of employment as growth in these sectors may not happen on its own. Sector-specific policy and programmatic support for the growth of retail, restaurants, hospitality, arts, and entertainment establishments may be needed.

Make Up of Businesses
Nubian Square has relatively few retail, accommodations, food, arts, entertainment, and recreation establishments. Nubian Square has the third smallest number of business establishments in retail, accommodation, and food services among the six Comparative Business Districts (Figure 5.2). The Square’s total number (151) of establishments in these industries is less than the average (212) among the Comparative Business Districts.

Figure 5.2: Comparison of Total Retail, Accommodation, and Food Services

Nubian Square also has fewer than average establishments in arts, entertainment, and recreation compared to the Comparative Business Districts (Figure 5.3). It has the third fewest establishments in these industries with Egelston Square having the most and Mattapan Square the fewest.
B. Residents’ and Business Owners’ Perceptions of Nubian’s Current Business Offerings

Residents and businesses highlighted areas of need and unmet demand in Nubian Square.

Retail, Accommodations, and Food
Residents and, perhaps surprisingly, business focus group participants suggest that the current retail mix lacks variety and needs calibration to match community desires. Nubian Square shoppers understand from first-hand experience this study’s findings that Nubian Square has a low concentration of employment in retail establishments compared to the rest of the city, which has hurt perceptions of the district as a place to shop. Focus group participants describe a need for:

- **More Diversified Retail Offerings/Retail Mix**
  - “There’s not enough diversity in the offerings. It’s not a place for people to stop at...they just pass through.”

- **Service Businesses**
  - “But when I was a teenager, there was a printing company and a cleaners and there was Ferdinand’s Furniture. We had some things. You can tell the difference and when you came you were here for a while. A Nubian Notion was here, and now there’s the check cashing place... There’s not a lot of service here.”

- **Sit-Down Restaurants**
  - “More of an evening attraction, such as the Mission Hill Grill. There just isn’t an option here to have a drink.”
  - “The biggest complaint I’ve heard from residents is that there’s no place to sit [at the restaurants].... My family looks for meals and sit-down establishments.”
Arts and Entertainment and Community Events

Often associated with evenings and weekends, Arts and Entertainment’s weaker retail performance for Nubian Square in relation to the Comparative Business Districts reflects focus group concerns about lack of retail offering; however, the weaker performance in this cluster may not reflect its potential demand.

Residents spoke to the lack of designated spaces for arts and events, as well as the need for nighttime offerings and recurring community programming that is outdoors and family friendly:

<table>
<thead>
<tr>
<th>Designated Spaces</th>
<th>“...my friend wants to do dancing stuff and there’s nowhere to have it outside of churches.”</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nighttime Offerings</td>
<td>“If there’s something at night that would be great to go.”</td>
</tr>
<tr>
<td>Community Programming and Events</td>
<td>Residents showed dissatisfaction with the lack of programming for events in the Square, a likely factor of the limited retail evenings and weekends storefront hours. Several residents mentioned the events they attend outside of Nubian: “We went to Jamaica Plain [for Halloween], the whole district was participating in the festivities. They had the haunted house and businesses all got involved with that. It would be great to do that in my own neighborhood. This neighborhood should be enlivened during the holidays.”</td>
</tr>
<tr>
<td></td>
<td>Importantly, there was general consensus among resident focus group participants for recurring events that were outdoors and were family friendly: “I would like to see outdoor events that happen here. Things that bring people out. I would like to see a [Nubian] Square market happening year round. I would love to see something connecting the history and culture of the neighborhoods happen more regularly. More outdoor events that are family friendly.”</td>
</tr>
</tbody>
</table>

Businesses also spoke about the lack of late-night and weekend opportunities, and suggest current weakness in Nubian Square’s overall performance creates a self-perpetuating cycle. Weaker sales make it difficult for current businesses to open during times that would subsequently attract more customers to Nubian Square, and make it a desirable corridor for new businesses to open to create a more interesting and wider retail mix. Business focus group participants spoke to this cycle:
Weekend Sales

- “Because we’re not staffed fully, I am not open on Saturday. We didn’t have enough sales to open then. I would like the opportunity to be open on a Saturday and receive the benefits from when there are events on the weekends.”
- “For a retail shop, Thursday through Sunday should be our busiest days but they’re not.”

C. Owned vs. Leased Space

A large majority of Nubian Square’s businesses rent their spaces. There are few self-owned business spaces, relative to the number of leased business spaces, which tend to cluster near Malcolm X and Melnea Cass Boulevards. Self-ownership can signify greater stability for a business due to limited influence from speculation or rent increases. Ownership can be a powerful tool for a business district to withstand market pressures from chain stores; however, property ownership can be challenging for smaller businesses. The importance of rental space for Nubian Square businesses indicates some form of rent-burden support must play a central role in any strategies for retail revitalization in Nubian Square.
VI. Commercial Real Estate Market

The leasing environment of retail and office space in Nubian Square is important as rents, real estate inventory, and broader real estate trends inform the approach for growing and expanding commercial business. Commercial rents are low in Nubian Square compared to other parts of the city. These low rents present both challenges and opportunities for the growth of Nubian Square.

An analysis of the retail and office real estate markets documents current conditions and places this information in the context of neighborhood and regional trends. The intent is to inform the discussion that will help recalibrate the conversation about Nubian Square’s real estate growth and better ensure that aspirations can be supported by the market conditions and economic development policy.

Figure 6.1: Roxbury/Dorchester Office Submarket

The Metro Boston retail market supports over 236 million square feet of space with another 5 million square feet of inventory expected for delivery in the next five years. Nubian Square and other retail hubs such as South Bay and Grove Hall are nested in the Roxbury/Dorchester Real Estate Submarket (Figure 6.1) of the Metro Boston market. The Analogous Submarkets located within the Metro Boston market that were analyzed in this study are the Longwood Medical Area/Mission Hill/Fenway, the South End, the Jamaica Plain/South Suffolk, and Brookline/Newton. See Appendix C for maps of each geography.
A. Retail Real Estate Market

The Roxbury/Dorchester Submarket has the following key characteristics:

**Size**

It supports the largest inventory of retail space (5.5 million square feet) of any of the five Analogous Submarkets, although these were not necessarily the largest in the Metro Boston market. The 0.75-mile walk-zone around Nubian Square represents about 15% (868,000 square feet) of the submarket retail inventory.

**Rents**

Retail market rents have been stable to declining market-wide since 2014, a function of broad trends in brick and mortar retail outlets. Projections indicate stable to a small increase (approximately 0.5% per year) in retail rental rates in the Roxbury/Dorchester Submarket, which parallels the Analogous Submarkets.

*Figure 6.2: Retail Rental Growth Trends*

Roxbury/Dorchester retail rents are on par with the Metro Boston average. However, retail rents in Roxbury/Dorchester are the lowest of the Analogous Submarkets at just under $25 per square foot; and retail sales volumes per square foot (imputed from retail rents) for Roxbury/Dorchester, while generally consistent with the Metro Boston market average, are among the lowest of the Analogous Submarkets. This is a reflection of much of the existing space is characterized as older and in need of modernization. The challenge is to compete with modern space available in other Analogous Submarkets; but low rents also limit an owner’s ability to earn enough on their
properties to maintain and modernize them. The advantage is that low rents can attract start-up businesses and other retailers that cater to more modest income households and, as retail rents in the city continue to climb, low rents can be a marketing opportunity.

Figure 6.3 is a summary of leasing activity specific to Nubian Square and reflects 40 leases in the past 10 years. With a few notable exceptions, rents have generally been in the low- to mid-$20s, most with concessions (two to three months free), most have been small (under 2,000 square feet), and with terms of five years. These rent figures represent triple net (NNN) leases which include real estate taxes, building insurance, and maintenance in the rent.

**Figure 6.3: Nubian Square Leasing Activity**

<table>
<thead>
<tr>
<th>NNN Asking Rent Per SF</th>
<th>NNN Starting Rent Per SF</th>

<th>Avg. Months Free Rent</th>
</tr>
</thead>
<tbody>
<tr>
<td>$22.42</td>
<td>$20.57</td>
<td>$20.07</td>
<td>2.0</td>
</tr>
</tbody>
</table>

As shown in Figure 6.4, one of Nubian Square’s strongest retail competitors described in Section VII: Retail Spending Opportunities is Centre Street in Jamaica Plain. Jamaica Plan has a leasing summary with rents at or above $35 per square foot (asking rents are higher), most with concessions (four months free), most have been small (under 2,000 square feet), and have reflected terms of five years in duration. This insight is provided from 20 leases over the past 10 years. These rent figures represent NNN leases.
Vacancy
Retail vacancies in all the Analogous Submarkets have generally been under 5% since 2010, with rates for Roxbury/Dorchester tracking among the lowest--as rents are low and act to the Roxbury/Dorchester Submarket’s advantage. Within the 0.75-mile radius there is 860,000 square feet of retail vacancy. The data does not include a substantial inventory of unoccupied space that is not marketed for occupancy for a variety of reasons including poor condition, ownership circumstances, or other factors.

To capture those vacancies where unoccupied space is not marketed for lease, an inventory was conducted in late 2019. Using the boundaries defined by Boston Main Streets that captures the core of Nubian Square, roughly 270,000 square feet of retail and service space exists, and around 13% (approximately 35,000 square feet) of that is vacant. All but two of the properties are in visible locations on Washington Street. This includes the most visible space, 2255 Washington Street. The blighting influence of these spaces cannot be overstated and must be addressed in Nubian Square if real change is to occur.

Overall, low Roxbury/Dorchester Submarket rents (below $25 per square foot) have clearly been a boon to the vacancy rate (2.5%) which is low, however, they also signal low sales volumes and potential weakness in underlying demand, meaning that the amount of space in the Roxbury/Dorchester Submarket is likely greater than can be effectively supported in healthy condition.

To put it another way, retail space in a healthy condition would likely require higher rents, requiring higher sales volumes, and requiring higher household incomes to support greater demand. The strongest Analogous Submarket are those which support a concentration of retail in a contiguous, walkable, pedestrian friendly environment, or that support a substantial, centrally
located parking inventory that allows for convenient access by car. Generally, these automobile-centric examples involve grocery-anchored shopping districts or managed centers. Centre Street in Jamaica Plain was identified by residents as their preferred shopping district due, in part, to meeting these criteria.

B. Office Real Estate Market

According to data compiled and analyzed by the CoStar Group, the Metro Boston office market supports over 346 million square feet of space with another 23 million square feet of inventory expected for delivery in the next five years. The most recent 2019 fourth-quarter report published by CoStar states that:

...overall performance is strong, driven by rapidly expanding tech and biotech firms, being drawn to large blocks of space in the central business district, the Seaport, Cambridge, North Allston, and suburban markets such as Somerville, Waltham, and Watertown, where the quality of environment needed for employee retention and recruitment can be accommodated.

In the City of Boston, quoted triple-net rents have reportedly become the norm, as have percentage bumps above 2%. While rents are likely to continue their rise in the near term, Boston is a tech-heavy economy, and rent declines [in those sectors] during economic slowdowns are typically sharper than in other markets.

On the supply side, deliveries [of new space] for the next several quarters are expected to be minimal, aiding the near-term vacancy forecast. However, a supply threat looms in 2021 and beyond. Millions of square feet have broken ground in 2019, including three towers in the central business district alone, meaning the market’s supply peak has likely yet to hit Metro Boston. While much of the space underway is already committed, risks may come from backfill space [space made available when tenants move into new space] when the economic outlook may be murkier than it is today.

Commercial markets are highly cyclical and tend to be especially sensitive to external economic shock. The office real estate market boomed in all Analogous Submarkets in 1999 and 2014 but no district was unscathed during the 2009 Great Recession. Unlike its stable retail counterpart, forecasts for the next five years portend a 1% annual rent decline resulting from the projected increase in office vacancy documented in Figure 6.5.
Figure 6.5: Office Vacancy Trends in Analogous Submarkets, 2019 and 2014

Size
Of the Analogous Submarkets, Roxbury/Dorchester has a relatively low office inventory (<4 million square feet), where 45% of the total inventory is within the 0.75-mile walk-zone from the Bruce C. Bolling Municipal Building. Fully a third of the Roxbury/Dorchester inventory comprises older Class C space.8 The Roxbury/Dorchester Submarket is closer in size to the Jamaica Plain (<1 million square feet) and the South End (<4 million square feet) office submarkets. These three office Analogous Submarkets are very small by comparison to Boston’s prime central business district and have historically been unable to compete for a meaningful share of Metro Boston’s growing office demand because of their smaller and older inventories; more difficult access to the regional labor market; and a more limited choice of quality restaurants, and other midday and after work opportunities. The size of the Longwood Medical Area/Mission Hill/Fenway and Brookline/Newton Submarkets (both supporting over 8 million square feet) reflect their historic appeal to fast growing healthcare and life sciences sectors.

Rents
Reflecting its relatively small inventory size, office rents in the Roxbury/Dorchester Submarket are among the lowest of the Analogous Submarkets, with current rents at just over $30 per square foot. In Nubian Square, the leasing environment does not deviate too far from its larger submarket. Based on 50 deals in the Square over the past 10 years, rents have generally been in the high $20s to low $30s per square foot, most with concessions (one to two months free), with small deals (under 5,000 square feet), and with terms under five years in duration. The Square’s average rents are in fact slightly higher than Roxbury/Dorchester’s total average, yet it also has slightly lower vacancy rates as well. Rents reflect public sector economic development supports and are not indicative of private sector market rates achievable in the Square today--which are substantially less--in the mid- to high-$20s per square foot gross.

Vacancy
Many of the largest office buildings in Nubian Square are owned by the City of Boston or nonprofits; the lower rents (under $35 per square foot) may play a role in the relatively low vacancy rates for the Roxbury/ Dorchester Submarket--generally under 10% since 2010; however,
the highly stable (and less prone to market disruption) public occupancies that dominate the tenant mix in Nubian Square are likely a greater influence on its lower vacancy rates at below 1%. Note that like retail, the data does not include a substantial inventory of those vacancies where unoccupied spaces--much of it on uninhabited upper floors--are not actively being marketed for occupancy for a variety of reasons including poor condition, ownership circumstances, or other factors.

C. Future Conditions

Nubian Square has comparatively low rents for both retail and office real estate. Though potentially beneficial for tenants, this also indicates low sales volumes for these businesses. Lower rents (i.e. lower sales) will attract smaller, newer businesses which can be a selling point in recruitment as a space for newer, unique businesses; however, these types of tenants are unlikely able to fund fit-out costs without some form of subsidy. Office-using businesses are relevant as they fuel upper-floor occupancy, which can help offset a landlord’s costs to maintain ground floor retail establishments and generate employee spending of the ground floor retail.

The broader market suggests rents above $50 per square foot are now necessary to support the cost of new Class A office construction. The Longwood Medical Area/Mission Hill/Fenway Submarket is the only one reaching that threshold, where the competition among healthcare and life sciences users is bidding up prices to well over $50 per square foot. South End is close behind, with rents above $40 per square foot. Review of leasing activity in Nubian Square suggests that rents in the mid- to high-$20s are normative.

Like retail indicators, office rents provide a warning signal about the health of the market, which cannot support the development of new, modern space at these rent levels. For locations like Nubian Square, this underscores the importance of economic development policy commitments such as those demonstrated by the institutional investment into the Bruce C. Bolling Municipal Building to aspirations for future office growth in the Square.
VII. Retail Spending Opportunities

Retail spending opportunity gap analysis is a tool used by major retail stores and restaurants to gauge market demand and competition within a specified geographic area. It presents a snapshot of the current consumer spending on various retail categories within a specified geographic area alongside actual retail store sales in those same categories within the same geographic area.

Where expenditures by households in the market area exceed sales in that market area, a gap or opportunity exists for new or existing stores within the market area to “capture” more of those household expenditures. This loss of potential sales is also called “leakage.” Conversely, where market area household expenditures are less than actual sales for a category, it indicates that stores in that category already attract consumer dollars from outside the market area and the opportunity to draw more retail activity may be more limited, or may require greater effort.

The gap analysis does not mean there is no opportunity for growth or improvement outside of these sectors, but is simply an evidence-based understanding of what is missing from the area from a consumer perspective. Additionally, the presence of a gap is no guarantee of a businesses’ future success; the gap does, however, provide a picture of current business opportunity for existing retailers to increase their competitiveness by capturing a greater share of customer purchases in existing stores and for new retailers to locate or expand facilities to take advantage of unmet customer demand.

A. Spending vs. Sales: Retail Leakage

In order to gain a deep understanding of the opportunity gap in Nubian Square, the study breaks down spending versus sales in a variety of ways:

Residential Households and Daytime Employees

In order to see the complete picture of retail sales in Nubian Square, it is important to look at retail spending by both residential households as well as daytime employees:

- Residential Households: Total retail spending per Nubian Square household is slightly lower than the average of the five Comparative Business Districts and the City of Boston overall, reflecting the concentration of younger households and lower median incomes detailed in Section IV, Demographics and Income.

- Daytime Employees: Residential spending does not provide a complete picture of sales, and employees must be accounted for. For example, the retail business sales per residential household in Nubian Square is above the average for the five Comparative Business Districts, although lower than the City of Boston overall—which indicates spending from daytime employees and visitors.
0.75-Mile and 1.5-Miles Radii

Figure 7.1 provides a glance at Nubian Square’s specific spending versus sales profile at the 0.75-mile radius and at the 1.5-miles radius:

- **0.75-Mile Radius:** The aggregate retail demand ($627,950,785 in Total Retail Expenditures) exceeds aggregate retail supply ($579,412,096 in Total Retail Sales) by $48,538,689 which suggests some opportunity for new or expanded business activity.

- **1.5-Miles Radius:** Residents are clearly buying less ($3,404,213,305 in Total Retail Expenditures) than local businesses are selling ($4,455,470,188 in Total Retail Sales), indicating that businesses are attracting customers ($1,051,256,883) from outside the area.

**Comparative Business Districts**

Figure 7.2 provides a comparison of spending versus sales in Nubian Square with the five Comparative Business Districts. When the per household sales by business in Nubian Square is compared to the five Comparative Business Districts, Nubian Square households exceed the average; when the per household spending is compared, it is slightly less than average. However, the spending totals hide sector level variations, meaning some sectors have opportunities for growth while others do not meet the demand.
The quantitative analysis of retail leakage in Nubian Square is confirmed through the shopping habits of residents who overwhelmingly describe how they bypass Nubian Square to shop in nearby business districts (e.g. Centre Street, Brookline Village, and Cambridge) because:

- Other districts include “convenience, parking, and diversity” in their business district;
- In Cambridge, “there’s every type of shop you can imagine on Mass Ave.--supermarkets, restaurants, Goodwill, Staples. I’m a fan of that area…. I think the student population helps. There’s a lot of diversity there and I really like that.”
- There is a good retail mix where one can shop at several different kinds of retail during one trip.

Additional qualitative information came from employees who total over 28,000 and 197,000 for the 0.75-mile and 1.5-miles radii respectively. A survey was designed and distributed to employees of office and retail businesses in Nubian Square and yielded important information about employees’ shopping habits:

- 80% purchase lunch during their work hours and 62% purchase breakfast during their work hours; however, these numbers do not necessarily indicate spending on meals in Nubian Square.
- Over 20% of employees surveyed said they rarely purchase their meals in the Square during work hours indicating a potential leakage to outside neighborhoods. While this leakage may be harming current business sales, it signals an opportunity for current businesses to capture this demand.
- Figure 7.3 further breaks down the frequency of employee shopping in Nubian Square specifically.
Figure 7.3: Survey Question: During your work hours, do you purchase food in Nubian Square? If so, how often:

B. Opportunity Gap: Growth that Responds to Current Retail Leakage

Within the 1.5-miles radius, residents are clearly buying less ($3,404,213,305 in Total Retail Expenditures) than local businesses are selling ($4,455,470,188 in Total Retail Sales), indicating that businesses are attracting customers from outside the area. This analysis sheds light on sector-specific retail opportunities with the potential to reduce the retail leakages within those sectors.

Data-Identified Opportunities

Data in Figure 7.4 reveals the sector-specific opportunities for growth within the 1.5-miles radius of Nubian Square as determined by FXM Associates. It projects that consumer expenditures (demand) exceed actual store sales (supply) within the Nubian Square retail market area. The analysis shows where the gaps between supply and demand are sufficiently large to indicate an opportunity to capture sales leakages, either through better sales performance in existing stores, location of new stores, or expansion of existing businesses. The market areas for these sectors are most likely to be within a 1.5-mile radius of Nubian Square. The final column in Figure 7.4, Project Annual Demand Growth from 2019, shows estimated growth rates for the retail categories over the next five years.

There are options for new Nubian Square businesses to keep residents shopping in the Nubian Square Business District in the following sectors:

- limited service restaurants and buffets
- hobby, toy, and game
- nursery and garden center
- hardware
- small grocery and meat markets
- health and personal care
- gifts and novelties
If only a quarter of the total leaked expenditure potential or “opportunity gap” went to support new square footage, between 78,560 and 148,520 square feet (17 and 31 stores, respectively) of additional business activity could potentially be borne by 2019 resident and employee spending within a 1.5-mile radius of Nubian Square. To put the opportunity gap in context, approximately 80,000 square feet will be available in Nubian Square in the next five years.

The largest sector by opportunity for growth is “limited-service restaurants” with 16,000 square feet. Note that these opportunity gaps are not indicative of a lack of retail in this and other specific sectors, but simply an outline of current spending outside of Nubian Square, which could be captured by existing or new businesses.

Resident- and Business-Identified Opportunities

Resident and business focus group participants readily offered specific suggestions to fill the opportunity gap in Nubian Square based on their own understanding of the need:

- “Fitness Center, coffee shop, nail salon, everyday things. Restaurants, places for lunch, dinner, if I want to grab a cocktail after work.”
- “Space where there could be a pop-up in conjunction with local restaurants to create an evening event.”
- “… Need a mix of everything like cleaners.”

These suggestions for new or expanded retail to fill this opportunity gap align with the findings from Section V, Nubian Square Businesses, that demonstrate Nubian Square lacks diversity in its retail offerings, and has a weak cluster for service, accommodations, and food.

C. Conclusion: Preserve and Expand

A successful response to filling Nubian Square’s retail opportunity gap must include strategies for business retention and improved profitability for those that have already invested in the Square; additionally, the response must signal that investing in Nubian Square is a smart economic decision and a
safe place to do business for new enterprises that may be seeking opportunities to innovate, expand, or relocate.

Most Nubian Square stakeholders intuitively understand the issues facing the Square and offer potential solutions from both within and outside of the community to break the cycle of poor sales performance. These sentiments signal a desire for change, but also anxieties that future change may result in a loss of character and racial and ethnic diversity.

In order to balance the needs of existing and new businesses and maintain the character of Nubian Square in the face of change, stakeholders describe the importance of:

<table>
<thead>
<tr>
<th>Using a Family-Friendly Approach</th>
<th>- Use a family-friendly approach that reflects the demographic findings that Nubian Square is younger than Comparative Business Districts and the city as a whole. One resident concisely makes this point, “Where the kids go, the parents go.”</th>
</tr>
</thead>
<tbody>
<tr>
<td>Embracing Business Diversity</td>
<td>- When identifying new businesses to complement the existing businesses mix, keep a community orientation that responds to the needs of the area’s diverse population by race, ethnicity, and age. Existing business owners feel that it is important for new businesses “to be connected in certain ways to the community.” “The ideas need to interface with the existing community and for the new folks coming into Roxbury. I think that’s why [a chain restaurant] just wasn’t a good fit at the time.”</td>
</tr>
<tr>
<td>Keeping an Afrocentric-Focus</td>
<td>- Continue to emphasize the Square’s history as an important place for black and brown residents. “I’m just wondering whether the places we like or go, will it influence the notion of [Nubian Square] being very ethnic? There’s a need to make sure [Nubian Square] stays Afrocentric.”</td>
</tr>
<tr>
<td>Welcoming Pedestrians</td>
<td>- Studies show that pedestrians spend more on average per retail trip than by other modes, indicating the value of fostering an environment that encourages walking through the Nubian Square Business District as opposed to driving from place to place. Understanding modal impacts on spending behavior is important to filling in retail and demand gaps and attracting these customers to Nubian Square.</td>
</tr>
<tr>
<td>Expanding Mixed-Income Housing</td>
<td></td>
</tr>
<tr>
<td>--------------------------------</td>
<td></td>
</tr>
<tr>
<td>• Retail growth cannot occur without an increase in actual spending from the neighborhood. Section IV, Demographics and Income, provides insights into the high concentration of subsidized, low-income housing units. This is an asset for Nubian Square as an affordable community within the urban core; however, the lower spending from high concentrations of lower incomes, without a mix of middle and higher incomes, can lower sales for a retail center like Nubian Square. Existing businesses understand these dynamics better than anyone. One restaurant owner describes their situation: “I do have plans to expand at the location I’m at. I want to include dinner but would also need to have guests with more disposable income.” Several business focus group participants have positive feelings towards the new mixed-income developments in Nubian Square; however, this was not without a concern for maintaining the Square’s character.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Increasing Business-to-Business Sales</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Nubian Square has a large office inventory and an existing base of commercial occupants and large nonprofits that goes beyond the retail sector. Some businesses see the potential to expand their business-to-business sales, stating that they “want to get more business from the nonprofits and other businesses...Nubian Square.”</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Expanding Cross Promotion</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Business owners highlighted the untapped opportunity to work together to cross promote and familiarize customers to other businesses in the Square. “I love [business name]...however it becomes the only destination in [Nubian Square]. I’ve had people walking by saying that they come here all the time for [business name] and say that they didn’t know we were [also] there.” Another business echoed this pattern stating, “There are events...but not enough conversation about the [other] businesses there...[we have] many businesses, but people don’t know they’re there.”</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Marketing the Business District</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Encouraging cohesion and cooperation among varying businesses is no small feat and will require shared organizational support and marketing. The City of Boston’s Office of Economic Development must be a driving force to support business expansion into the Square and to market the Square to conventioneers and tourists. Dudley Square Main Streets can continue to be the force to “brand up and market up” the Square’s current businesses.</td>
</tr>
</tbody>
</table>
Nubian Square has the potential to be one of the strongest retail markets of the six Comparative Business Districts; improvements to the public realm, parking availability, and perceptions of safety will have immediate and tangible effects on increasing pedestrian activity and creating a more active and robust retail environment.

Current conditions in Nubian Square provide an immediate opportunity to promote increased pedestrian activity. With a housing density of 11.1 units per acre, Nubian Square already has a large residential population and is more densely populated than 61% of all MBTA transit stations, providing a strong base of potential shoppers. Of the six Comparative Business Districts analyzed, Nubian Square has the highest proportion of households with no vehicle (46%) and the second highest percentage of stakeholders who walk to work or who work at home (24%). Additionally, Nubian Station is an active transportation hub in the center of the business district, serving 43,000 daily passengers on an average weekday. By 2024, Nubian Square’s population is expected to grow by 4,600 residents.

Improvements to the public realm, parking availability, and perceptions of safety can play a significant role in capturing the demand and increasing retail sales.

A. Public Realm

While Nubian Square may have a higher rate of non-car users, the comparatively lower sales described in Section VII, Retail Spending Opportunities, may be partly a consequence of its lack of pedestrian investments and resulting leakage. Pedestrians and transit riders are important groups as studies have shown pedestrians on average spend more on retail in main streets than drivers and public realm improvements and increased safety provisions from vehicles increase pedestrian visit duration and encourage increased spending.

In Boston and around the globe, neighborhoods are embracing Complete Street Guidelines that prioritize people over cars and work to advance projects that use design to enhance the character of a place and increase connectivity between people and the built environment.

"Complete Streets are more than bike lanes, crosswalks, sidewalks, and vehicle lanes; they are buildings that engage the people in the right of way. Well-designed plazas, squares, and greens are framed by landscape design and architecture that relates to local culture, history, and climate. New urbanists have long advanced the idea that the public realm ties cities together and is a potential source of joy and inspiration to all citizens. Former Bogota Mayor Enrique Peñalosa may have said it best: “Great public space is a kind of magical good. It never ceases to yield happiness. It is almost happiness itself.”"
Investing in great public space has the potential to create a safe and comfortable shopping experience that reduces leakage to other geographic areas. This investment needs to go beyond just sidewalks and crosswalk signals and take a more holistic approach; the public realm as a whole is a key issue to creating a vibrant business district. Current public realm conditions in the Nubian Square Businesses District are contributing to retail leakage with residents travelling to Comparative Business Districts, namely Jamaica Plain, that strike the right balance in providing residents with a safe and comfortable shopping experience.

Focus group participants point to the following associated reasons for not frequenting Nubian Square:

- poor storefront signage
- vacant retail space with roll down grates
- few shade trees
- narrow and unsafe sidewalks
- inadequate crosswalks and lighting
- no street furniture
- poorly maintained MBTA structures
- speeding vehicles

The lack of infrastructure investment in Nubian Square’s public realm deters current residents or new shoppers from stopping and exploring the business district on foot. One business participant states, “...we need crosswalks for people to cross and get into my building.” Another suggests, “You need foot traffic after 6 p.m. To get people, you need to have people. If the street is empty, you don’t feel comfortable being the only one.” Participants imagery of Nubian Square is as a thoroughfare for vehicles, “It’s so busy on Washington Street and it’s so fast that you’re not going to see the businesses.”

Business owners and residents describe some of the issues that need to be addressed in order to enhance public space in the Nubian Square Business District and have a positive impact on the retail environment; many of the issues tie into concerns around sense of safety in the Square:

| Grated Storefronts | · Referencing 2255 Washington Street as an example of a vacant property not marketed for lease, one business participant points to grated vacant property as a contributing factor: “You see a grate on the property and it’s not aesthetically pleasing. It’s disappointing to see....” |
| Storefront Signage | · “Upgraded [storefront] signage would be great if they could get in with the sign program at the city.” |
| Street Furniture | · Residents suggest increasing the amount of street furniture. |
| Public Art | · “…public art that’s engaging and beautiful” through a placemaking plan. Consistently, participants mention forms of beauty and art remain key points for improving Nubian Square’s public realm. |
| Wayfinding Signage | · Wayfinding signage would help to increase accessibility and visibility and positively contribute to parking access and a coordinated marketing and branding strategy. “There’s city signs [in other neighborhoods] letting you know where there are public restrooms or parking available.” |
Furthermore, many residents and business participants feel the public space in Nubian Square is unfriendly at night due to poor lighting as a result of vacant and closed storefronts as well as a lack of adequate street lighting.

**Lighting**

- A business focus group participant reasons, “If the place on the front of the Bolling Building were there, it would be a beacon of light.”

Findings from Section V, Nubian Square Businesses, identify low sales as a challenge for opening on weekends or evenings. With fewer businesses opening during these times, the streetscape is darker due to fewer storefront lights, creating a self-perpetuating cycle of inactivity during these times.

**B. Parking**

While the pedestrian experience is paramount to the retail environment, driving and subsequently parking needs remain an essential component of a healthy retail district. Unless more publicly accessible parking spaces are made available, Nubian Square business growth will be stymied due to a limited customer base; residents who are committed to “shopping local,” as well as potential visitors from other neighborhoods, will drive to other shopping districts for their goods and services. The walking distance and public transit markets--whether local residents or employees--are not adequate to support the current, desired, and potential level of retail, restaurant, entertainment, cultural, and other activities.

**Parking Inventory**

Figure 8.2 document that there are few public parking lot options for visitors to the Nubian Square Business District.

Business owners and residents express the need for additional public parking to support Nubian Square’s ability to attract and sustain a customer base. One business participant explains, “Parking is a tremendous issue and people circle and take an extra 10 to 15 minutes.” One resident furthers this perspective, “People won’t show up because they know they won’t find a parking spot.” Additionally, residents express frustration about searching for parking and about business patrons parking in residential neighborhoods.
Employee Parking
The parking needs of employees are especially challenging for the Nubian Square Business District’s parking inventory since employees are more inclined to park for longer periods of time, potentially preventing shoppers from parking in close proximity to businesses. Of the 20 Nubian Square employees surveyed, 47% drive to work, and 43% either walk or take public transit. High employee driving rates can create a parking challenge by limiting available parking spaces for new or existing shoppers from the neighborhood or region who prefer to travel to Nubian Square by car.

Employee surveys and focus group conversations with businesses indicate that for those who drive, limited parking is a primary concern, with many employees and business owners parking in residential neighborhoods and walking to their business destinations.

Wayfinding Signage
The lack of wayfinding signage may further limit customers’ ability to locate available public parking. One business owner explains, “[Regarding] parking and bathrooms: signage for the businesses is really important. It should say welcome to [Nubian] Square, letting people know where parking is.” Another business owner points out specific concerns about the Blair Lot, the business district’s largest public lot,
There’s a huge lot, the Blair Lot, and it’s all fenced in when you drive down Washington Street. The gate is locked. If I were in front of that building as a store, I’d be [unhappy]. You have to swing around the back and the lot is very visible.” Well-designed wayfinding signage can help to improve the parking climate as well as other public realm conditions.

Demand
Parking is, and will continue to be for the foreseeable future, an essential infrastructure for success. Additional pressures on parking will come from development spurred by the City of Boston’s designation of developers for four parcels of land; the anticipated developer designations for two additional parcels; proposed private and institutional developments; the unmet parking need of Boston Public School employees and visitors; as well parking demands for well attended evening meetings at the Bruce C. Bolling Municipal Building.

C. Safety
Perceptions of safety are a key factor in expanding the customer base and encouraging new or returning shoppers to spend their dollars in the Nubian Square Business District rather than in surrounding businesses districts.

Focus group participants agree that both the reality and the perceptions surrounding Nubian Square’s safety are damaging to business sales and customer and civic experience. Perceptions are important to note, as criminology research suggests “fear of crime generally occurs at higher rates than recorded victimization.”

Regardless of real crime levels, focus group participants felt the current police presence and approach in Nubian Square actually heightened the sense of danger—likely pushing drivers and transit riders through Nubian Square to the next closest business district, instead of stopping to enjoy the Square and explore its retail offerings. In particular, businesses had issues with the emergency police lights and the overall police presence stating, “It’s like a war zone with the [police] lights.” Another business owners says, “Others will see a police car and wonder what’s going on.”

Nubian Square has a police presence from both the MBTA Transit Police and the Boston Police Departments. Addressing issues surrounding safety is vital to creating a healthy retail environment, especially in a manner that understands community contexts; a more coordinated approach between the MBTA Transit Police and Boston Police is needed. Most focus group participants agreed the police presence is necessary, but offer new approaches to promote a healthier and more welcoming environment. A consistent issue brought up surrounding the police was the use of cars over walking a beat. Instead of flashing police cars, one focus group participant suggests, “There could be more beat cops and I don’t want more harassment, but I would want to see friendlier police outside the station. To keep people moving along. You need it to a degree now and there needs to be some more sensitivity training with the police.” Residents and businesses show a desire to work with the police to create more
effective community policing that would improve perceptions of safety, and make passersbys excited to shop and enjoy the amenities in Nubian Square.

D. Multifaceted Approach
Effective solutions for Nubian Square’s Business District must be three-fold: 1) Improve the public realm to increase pedestrian activity; 2) Conduct a parking inventory, including the parking proposed in the new development and; 3) Improve the perceptions of safety in the Square. Nubian Square already has the potential to be a strong and active business district, however, key public realm and safety issues have pushed potential shoppers away from their closest neighborhood retailer to Comparative Business Districts, namely Jamaica Plain.

The poor state of Nubian Square’s public realm was repeatedly mentioned by focus group participants, specifically around vacant buildings with old and dilapidated grates; lack of quality signage for both businesses and public spaces; outdoor furniture and increased street lighting to increase safety, and wayfinding signage. Improving the public realm based on these specific findings will help attract residents to walk to Nubian Square and activate its streetscape, as well as encouraging the cars currently seen speeding through the Square to slow down, and even stop to shop.

These drivers cannot stop to shop if parking is unavailable. Focus group participants suggest that parking is not an easy task in Nubian Square, and surveys of employees suggest a high rate of employee parking usage leaves spots full for extended periods; furthermore, several lots within the Square are expected to see development that will affect Nubian Square’s current parking situation. A full analysis should be conducted to completely understand the parking supply and demand based on current and future projections.

Finally, the perceptions around lack of safety highlighted by all focus group participants suggests this is a key deterrent for capturing the demand. Perceptions of safety were damaged by several key factors including: parked police cars with flashing blue lights; poor pedestrian safety infrastructure such as crosswalks and signals; and dim or non-existent lighting at night. These areas must be addressed to encourage new or returning shoppers to shop in Nubian Square versus other Comparative Business Districts that are perceived as safer.
IX. Key Findings, Recommendations, and Conclusion

The vision articulated for Nubian Square is no different from the aspirations for lively and busy neighborhood business districts across the City of Boston: a place which draws residents and visitors to browse, shop, eat, and socialize with their friends and neighbors; a place with business and community activity during the evenings and on weekends; a place that builds on the neighborhood’s history and culture; a place that is easy to navigate, and is welcoming, clean, and safe.

The goals of the Nubian Square Market Analysis are to: 1) identify factors that distinguish Nubian Square as a location capable of attracting and sustaining businesses that will increase the vibrancy as a retail center; 2) recommend specific initiatives and strategies that can increase Nubian Square’s vitality as both Roxbury’s commercial hub and one of Boston’s major community business districts; and 3) inform the discussion that will help recalibrate the conversation about the Square’s commercial growth.

Roxbury has a strong set of assets: a growing population and number of households; a relatively young population; some residents with disposable income; residents who believe in supporting local and community businesses; and racial and ethnic diversity. Nubian Square’s assets also include: access to a large number of commuters at Nubian Station; proximity to historic buildings and an increasing number of community and cultural spaces; a large number of small, invested, and activist businesses owners; and businesses with a regional draw.

The recommendations provide numerous insights and implications for policymakers, business and property owners, brokers, and residents. They suggest how Nubian Square can break its long pattern of underperforming relative to market opportunities and local community aspirations and begin to grow to meet the needs of residents and be a more welcoming location for small businesses.

It is not an understatement that very intentional and coordinated efforts by the City of Boston, the MBTA, the Commonwealth of Massachusetts, local businesses, nonprofits, community development corporations, property owners, the hospitality industry, and visitor bureaus will be required to realize the vision and implement the strategies.

A. Key Findings

The following are key findings from the study’s quantitative research and associated analyses:
DEMOGRAPHICS

- Nubian Square has a larger concentration of population and households within 0.75 mile and 1.5 miles and therefore a larger local market than the five Comparative Business Districts. These are key factors in generating economic growth and development, but households must also have sufficient disposable income to support local businesses.

- Between 2000 and 2010, Nubian Square grew at a higher rate (25%) than all other Comparative Business Districts as well as the City of Boston as a whole. Since 2010, Nubian Square has had the second highest growth rate, exceeded only by Hyde-Jackson Square. From 2019 to 2024, Nubian Square’s population is projected to grow by 5.5%, exceeded only by Hyde-Jackson and Egleston Squares. The pattern portends expansion of the market opportunity for Nubian Square businesses, especially as the growth is trending towards greater economic diversity than experienced historically.

- Nubian Square’s population has a lower than average percentage of Millennials, age 24 to 44, but a considerably higher percentage of the younger, under age 23, Generation Z population. The current Nubian Square business mix does not respond to the shifting demographic needs which must be recognized for local businesses to optimize their share of growing demand and fully participate in future opportunities.

- The area within 0.75 miles of the Bruce C. Bolling Municipal Building at 2300 Washington Street in Roxbury has the most racially and ethnically diverse population of the five Comparative Business Districts; the vibrancy of its racial and ethnic mix is one of Nubian Square’s competitive advantages.

- Nubian Square has, by far, a higher proportion of house- holds with no vehicle (46%) than the five Comparative Business Districts; additionally, it has the second highest percentage of residents who walk to work or work at home (24%), exceeded only slightly by Brookline Village (25%).

- With 21% of all units built since 2000, Nubian Square has a higher percentage of renters and a newer housing stock than the five Comparative Business Districts.

INCOME

- Nubian Square households have relatively low incomes. The area’s median household income ($41,448) is lower than the median in the Comparative Business Districts ($55,000) and City of Boston as a whole ($69,160).

- As the younger households in the area age and as the wave of larger-scale, new mixed-income residential development now under construction and in the pipeline delivers greater economic diversity to the area, Nubian Square incomes and expenditure potentials are expected to rise, bringing opportunities for a stronger and more vibrant business environment.

BUSINESSES

- Nubian Square has a high percentage of jobs in health, education, and community organizations. This suggests there are a large number of office workers who may be able to support expanded daytime retail and restaurant offerings in Nubian Square.

- Nubian Square has a low share of jobs and few establishments in retail, accommodations, food, arts, entertainment, and recreation-related industries. In focus groups, residents and employees stated that they want to see growth in these sectors in Nubian Square. However, it is important to highlight these low shares of employment, as growth in these sectors may not happen on its own; sector-specific policy and programmatic support for the growth of these industries may be needed.
RETAIL REAL ESTATE

- Retail spending per household is slightly lower than the average of Nubian Square and the five Comparative Business Districts as well as the City of Boston as a whole, reflecting the concentration of younger households and lower median incomes in Nubian Square.

- Much of the commercial space in Nubian Square is characterized as older and in need of modernization. The market area rents are insufficient to support new construction or extensive rehabilitation without subsidy of some sort, including subsidy from higher yielding market rate rental housing. The blighting influence caused by vacant, dilapidated commercial spaces cannot be overstated for its adverse effect on perceptions of overall value.

- On the flip side of these market conditions, the prevailing lower rents offer opportunities for an eclectic mix of small, independent, entrepreneurial businesses designed to bring new energy to Nubian Square; most of these businesses will need financial assistance for real estate and business start-up/expansion, as well as cooperation from landlords who see the long-term value of expanded and revitalized retail/restaurant activity to their properties notwithstanding lower initial rents.

RETAIL SPENDING OPPORTUNITIES

- A retail opportunity/gap analysis identified immediate opportunities to significantly expand existing business sales and/or potential absorption of over 80,000 square feet of retail and restaurant uses based on sales leakage within a 1.5-miles radius of Nubian Square.

- Based on current sales leakages, business opportunities include limited service restaurants and buffets; health and personal care; hobby, toy, and game; hardware; and specialty stores such as meat markets, gift/novelties, and garden centers. The retail opportunity/gap analysis does not mean there is no opportunity for growth or improvement outside of these business types, especially for restaurants and entertainment, which are expected to draw patrons from outside the local market area.

B. Recommendations

The market analysis led to specific, implementable policies and strategies to realizing residents’, business owners’, and employees’ shared vision: Enliven the Nubian Square Business District for both residents and visitors during the evenings and weekends and support a mixed-use, urban lifestyle environment.

As previously mentioned, with the magnitude of development and infrastructure investments in the area, it is not an understatement to say that Nubian Square and Roxbury are at a crossroads. This study takes an inclusive approach, documenting current conditions and assets, addressing challenges, and identifying opportunities so that the growth of the community’s retail and commercial environment is not left to chance in the face of change.

The seven recommendations listed below are a strategic path to realizing the collective vision for the Nubian Square Business District. Informed by current local data, the recommendations address underlying conditions of safety and four core elements requisite to vitality that were adapted from the Main Street America Transformation Strategies approach: economic conditions, placemaking, marketing,
OVERARCHING RECOMMENDATIONS TO SUPPORT SAFETY AND ORGANIZATIONAL CAPACITY

Safety and the reactivation of Dudley Square Main Streets are overarching themes that run throughout all of the study’s recommendations. These two themes emerged out of every segment of the study’s research and are palpable in: the shopping pattern of residents for whom Centre Street in Jamaica Plain, not Nubian Square, is the preferred destination due to the mix of shopping options, the availability of parking, and the quality of goods/services; and the concerns of residents and business owners who identify the perceptions of safety and the need for significant streetscape and private property improvements as challenges.

1. Improve perceptions of safety in Nubian Square.
Residents and business owners alike mention safety as a concern in Nubian Square, particularly at night. Although this study does not analyze crime data on Nubian Square and the Comparative Business Districts, the pervasiveness of the perception is sufficient to motivate the need for change. Residents and business owners do not see the presence of a parked police cruiser with its flashing blue lights as a deterrent to undesired activities. Instead, they view it as a warning to residents and visitors of a potential safety or health emergency in the Square and a signal that people should avoid the area. The cruiser also provides a clear indication of where police are not, as well as where they are, encouraging any undesirable activities to occur elsewhere in the Square. Residents and business owners recommend replacing the cruiser with active police foot patrols, which not only add to the sense of safety but also provide opportunities for positive police interaction with the members of the community. Additionally, improved street lighting and street activities that bring increased foot and vehicular traffic into the Square in the evening were seen as enhancing the sense of safety.

2. Reactivate Dudley Square Main Streets as the driver of programs and activities.
Dudley Square Main Streets continues to have a critical and unique role to play in the revitalization of Nubian Square. A focus on Nubian Square Business District marketing and advocacy is as vital as working with prospective and existing businesses. Actively working with the City of Boston’s Office of Economic Development, an adequately staffed Main Street program can: broker positive outcomes between existing and prospective businesses and landlords; expand activities to bring residents and visitors into the district, such as special and regularly recurring events; and continue to expand business capacity building in terms of workshop series and hands-on business assistance to improve business operations. Main Streets should take advantage of the specific opportunities identified in this study to recruit prospective new businesses and, more importantly, provide objective evidence to support marketing and financing for expansion of existing businesses and retail space.

ADDITIONAL RECOMMENDATIONS TO SUPPORT ECONOMIC CONDITIONS, PLACEMAKING, AND MARKETING

Five additional recommendations are important components of the strategic path toward the collective vision of Nubian Square:

3. Recognize market opportunities and invest in specific strategies to assist existing retailers to expand while also recruiting retailers to respond to these opportunities.
Roxbury’s population density and growth rates bode well for expanding market opportunities, as do residents’ relative youth and high degree of ethnic diversity. The current retail mix, however, needs to broaden in order to
capture those opportunities. Warehouse clubs and superstores should not be encouraged because they do not fit residents’ and business owners’ vision for Nubian Square. The table below identifies specific types of retail, service, and event opportunities that should be prioritized to meet demand.

A. Preserve and expand on core retail, such as convenience goods and the daytime lunch trade. The data indicates that Nubian Square ranks fourth among the six Comparative Business Districts in the number of retail establishments. Focus group participants and an inventory of businesses also indicate that Nubian Square has a dearth of local services such as dry cleaning, shoe repair, yoga/fitness, and pet care/grooming that does not meet the needs of residents and employees of local businesses. Residents are already purchasing these services but travel outside of the Nubian Square Businesses District to Washington Mall, Grove Hall, and especially to Jamaica Plain to do so. These types of small businesses are an ideal fit for Nubian Square. This recommendation also includes a strategy to minimize the “creep” of retail businesses along Warren Street and Washington Street in order to reinforce the core of Nubian Square as the shopping district.

B. Expand and attract more destination-driven entertainment/dining options. Of the Comparative Business Districts, Nubian Square has the largest population within a 0.75-mile radius, also making it the densest. Its diverse population is by far the youngest, and it has the largest population under the age of 44. These characteristics, together with Nubian Square’s transit advantages, hold a competitive advantage for a vibrant urban entertainment environment. Yet Nubian Square lags Egleston Square, Ashmont-Fields Corner, and Brookline Village in the number of Arts, Entertainment, and Recreation establishments as well as in the number of Accommodation and Food Services (mostly restaurants) establishments. Focus group participants of all ages identified the need for destination-driven entertainment/dining options.

C. Recognize and capitalize on trends toward a younger and more diverse population. Among the retail uses in demand by younger residents and the diversity of the residents are: health and personal care; hobby, toy, and games; and limited-service restaurants. To complement the business activity, both residents and businesses expressed the desire for special events on the weekends and in the evenings, which would draw young people and families to the Square including concerts, farmers’ markets, book fairs, and a variety of ethnic pop-up retail and events.

</table>
| Health and personal care store
| Hobby, toy, and game store
| Clothing store
| Specialty store
| Hardware store
| Housewares store
| Other general merchandise stores, including those with an Afrocentric orientation
| Limited-service restaurants
| Sit-down restaurants, especially those with entertainment
| Dry cleaner service
| Shoe repair service
| Other locally-oriented services, including those with an Afrocentric orientation
| Yoga/fitness studios
| Pet care/grooming
| Outdoor concerts
| Farmers’ market
| Book fairs
| Ethnic pop-up retail and events
| Cultural events
| Themed experiences: e.g. First Thursdays
D. Recruit an eclectic mix of independent, entrepreneurial businesses designed to bring new energy to Nubian Square. Property owners must be engaged to support such efforts for long-term gains in value. As noted earlier, one of the potential growth sectors identified in the retail gap analysis is “other general merchandise” which includes: specialty stores, hardware, housewares, clothing—in other words, a mix of products for smaller niche, independent businesses. In focus groups, residents recommended expanding on Nubian Square’s existing Afrocentric niche.

The documented potential growth sectors must be actively promoted to current Nubian Square businesses to increase sales. In addition, to expand the mix of businesses, a top priority should be the marketing of these potential growth sectors to targeted, successful businesses currently located outside of the Square that might be recruited for expansion of their businesses to Nubian Square. However, most of these businesses will need financing assistance for real estate and business start-up/expansion. Specifically excluded are warehouse clubs and superstores, which do not fit residents’ and business owners’ vision for Nubian Square.

4. Promote increased office space development, particularly above street level. Businesses and nonprofits with primarily office functions have a high share of employment in Nubian Square and those that currently utilize ground floor space might find upper floor space more attractive if it were suitably developed. This would free-up more first floor space for retail and related uses. In addition, increased upper floor office space development could support expansion of office-using industries in the Square; with Class A\textsuperscript{19} office space at a premium in the City of Boston, increasing the inventory will meet any demand, particularly from proximate clusters\textsuperscript{20} such as Healthcare and Biotechnology associated with Boston Medical Center. Coworking spaces, which do not necessarily require significant upgrades to existing spaces, may also be viable for upper floor spaces, taking advantage of the superior public transportation accessibility as well as the Square’s relatively low rents.

The current mix of housing in Nubian Square is heavily skewed to low- and moderate-income housing, which is critically needed in Boston’s housing market. Nevertheless, neighborhoods such as Nubian Square are home to a disproportinate share of lower-income residents whose incomes cannot support the number and variety of retail businesses desired by residents overall. Additionally, the area’s low household income limits the ability of local residents by themselves to support the higher rents that would be charged to retailers for renovated space or new construction.

Increased local market rate housing would be beneficial to help achieve the desired retail balance in Nubian Square. Based on market demand, market rate housing is supportable and will help achieve feasibility for development projects whose program and goals can include affordable, as well as market rate housing, and expanded retail activity. The current “one third/one third/one third” formula used in recent procurements in Nubian Square does not support a robust retail mix and should be revised to allow for 50% market rate housing. At the same time, Nubian Square’s existing affordable housing must be preserved so that low- and moderate-income residents can continue to live in a centrally located, transit-accessible neighborhood and share in the benefits of revitalization. More affordable housing also needs to be built in other centrally located and transit-accessible neighborhoods in the City of Boston and elsewhere in Metro Boston.

6. Improve the public realm and shared amenities. Many of the public realm and amenity elements that make for a successful business district are either missing or in short supply in Nubian Square. When residents spoke about the reasons they shopped in other districts, they cited a comfortable pedestrian environment, one with shade trees, seating options, proximity to parking, ease and sense of safety crossing the street, and clear signage. The following recommendations respond to the areas public realm and amenities needs:
A. Significantly improve the MBTA’s investment in Nubian Station and in Nubian Square. Residents and business owners view the MBTA’s Nubian Station as a source and significant contributor to the general sense of disinvestment in Nubian Square. It contributes to the negative perceptions of the Square through the general neglect, and lack of basic maintenance and upgrades. The maintenance of MBTA bus stops are also a concern: for example, the stop at the gateway to Nubian Square and the Roxbury community at the intersection of Melnea Cass Boulevard and Washington Street is not cleaned; and the stop at the intersection of Ruggles Street and Washington Street has been missing a pane for the past year. The lack of maintenance and upgrades affects the quality of life of residents, businesses, and commuters. It reduces confidence in the MBTA and is evident when compared to the maintenance and upkeep of the covered bus stops in Downtown Boston, the South End, and Jamaica Plain.

B. Develop a parking strategy. This study’s parking analysis and the comments of both residents and businesses identify a need for additional parking. There are few public parking spaces available for Nubian Square visitors. There is additional pressure related to proposed future developments in the area that could further limit access to public parking. In focus groups, residents and business owners highlighted their increasing frustration with access to parking and their concerns about the impact of future development on an already inadequate parking system. Suggested interim measures to improve parking include providing access to the Blair lot from Washington Street and designating a location for business employees to park in order to minimize the long-term utilization of street parking.

C. Eliminate “blighted” properties and facades. There has been strong public investment in the area, including the construction of the Bruce C. Bolling Municipal Building, the upgrade of Dudley Street, and the anticipated reopening of the renovated Dudley Branch of the Boston Public Library. Nubian Square is also home to many businesses and property owners who have a strong sense of civic pride which is manifested in the high level of maintenance and cleanliness of their own storefronts as well as the cleaning and sweeping of sidewalks adjacent to their businesses.

However, some property owners with vacant storefronts do not provide adequate maintenance. The property at the former Edison building at the intersection of Warren Street, Dudley Street, and Harrison Avenue, as well as the Dartmouth Hotel Apartments, 2255 Washington Street, and 2219 Washington Street are all prime examples of poorly maintained properties. In addition to maintenance, the use of solid roll-up grates destabilize the business district sending a message that the area is unsafe, and a place of disinvestment and urban decay.

These properties require an unprecedented level of scrutiny by the City of Boston to assist Nubian Square in making the necessary strides toward strengthening the business district, increasing businesses profitability, and branding the district as a strong and welcoming gateway to the Roxbury community.

D. Develop a streetscape, lighting, and signage program. In addition to the “blighted” properties, focus group participants highlight their concern that other storefronts have signage that is outdated and inappropriate and in need of an upgrade. Traffic calming measures are also necessary particularly for the higher-speed arteries such as Warren Street, where fast-moving traffic inhibits pedestrians from crossing and reduces access to businesses. Street furniture that provides residents and visitors comfortable places to sit as well as other amenities will help to reinforce the streets as a place. Additionally, current wayfinding signage is inadequate; business owners identify the need for wayfinding signage to public parking lots and to key buildings and sites to increase connectivity.
7. Implement a well-designed and coordinated Nubian Square marketing strategy. Nubian Square has strong, but unrealized assets that need to be leveraged in order to build an authentic brand identity that is rooted in the Square’s:

- History as an entertainment and dining hub for the City of Boston;
- Abundance of cultural, racial, and ethnic diversity, grounded in but not limited to its historic Afrocentric identity, which makes it a welcoming environment for residents and visitors alike;
- Progressive, influencer-driven outlook with pop-ups and curated brands that demonstrate that Nubian Square is “not your grandmother’s shopping district;” and
- Eclectic mix of independent, entrepreneurial operators in an environment where rents are low enough to allow experimentation and dynamic change.

This branding should be supported by a well-designed and coordinated marketing strategy that includes special events, seasonal themes, cultural history, and collateral material aimed at Roxbury neighborhood residents, local visitors, conventioneers, and tourists. Though initial steps have been taken, this branding and marketing needs to be expanded and should include a strong online presence which is carried on all local business websites.

C. Conclusion

The recommendations set forth in the Nubian Square Market Analysis were not developed in isolation and must be implemented using a multifaceted approach that is carefully coordinated with planned public and private investment in Nubian Square.

Over the next five years, the City of Boston will be investing $12 million in street and sidewalk reconstruction along Washington Street and Warren Street in Nubian Square. Together with the construction at 135 Dudley Street (former B2 Police Station site), 2147 Washington Street, and 40-50 Warren Street, the resulting impact of these projects on traffic, construction equipment, closed/narrowed sidewalks, and limited parking may create a state of upheaval and turmoil in Nubian Square that increases pressures on existing businesses.

These recommendations and the construction impacts on businesses highlight both the need for a multifaceted approach to the revitalization of Nubian Square and a strong advocate to shepherd the implementation of the recommendations over the short- and long-term.

The City of Boston’s Office of Economic Development can play a vital and pivotal role in fully strengthening Nubian Square’s retail and commercial environment. With its proven organizational capacity, the Office of Economic Development should be the active and fully present managing entity, addressing the core elements of safety, economic conditions, and marketing and coordinating all public activities in Nubian Square by:

- Working with Main Streets and businesses to improve the business climate in Nubian Square while protecting and promoting public investment in the public realm;
- Coordinating the MBTA Transit Police and Boston Police Departments to increase both the sense and perception of safety in Nubian Station and in Nubian Square; and the complete and thorough upgrade of Nubian Station, opened in 1993;
- Marketing the Square both within the City of Boston but also to regional visitors, conventioneers, and tourists;
• Working aggressively to understand which small businesses in other business districts are ready to expand and for which the diversity and eclectic mix in Nubian Square would be an asset; and
• Giving “blighted” properties an unprecedented level of scrutiny to eliminate the effects their current conditions have on Nubian Square.

Nubian Square and Roxbury as a whole abound with assets that need to be acknowledged and celebrated in both the business offerings and community events in the Square. The *Nubian Square Market Analysis* identifies the foundational aspects that can assist in the rejuvenation of Nubian Square.
Appendix A: Summary of Focus Groups
Findings and Survey Questions

Two focus groups were held with Roxbury residents on the evenings of October 29 and November 6, 2019; through questions and conversation, the focus group sought to shed light on residents’ current use of Dudley Square, their perceptions of assets/issues, and potential strategies to ameliorate the issues. Participants range in age from Millennials to 75 and all are committed to the long-term viability of both the Roxbury community and Dudley Square. Participants are both renters and owners of their homes in Roxbury; some were life-long residents, while others were recent arrivals.

The primary desire of the participants is to see Dudley Square restored to its function as the neighborhood’s business and cultural center--a place where they can shop for their family while also meeting their neighbors and friends. The general consensus is that Dudley Square has been neglected for too long: this is evident in Nubian Station’s current state of disrepair. Other than the community’s human wealth and the construction of the Bruce C. Bolling Building, residents struggle to identify assets. Concerns about issues and disinvestment are identified far more readily. The lack of quality and variety of goods and services leads residents to neighboring business districts where they can: park and shop; get most of their family shopping done in a single trip; shop at a range of stores. These neighboring business districts also provide: a friendly and welcoming ambiance; host Saturday or holiday street activity/festivals; and a public realm that contributes to the sense of comfort, safety, and security.

In the face of increased development, residents want to maintain their sense of community, one in which the stores and or ownership is Afrocentric. Residents also listed the types of stores that felt would keep them coming into Dudley Square to shop and browse.

A. Dudley Square’s Assets
Residents spent some time trying to identify Dudley Square’s assets. Roxbury and Dudley Square residents are an underutilized asset to the business district. Several residents feel that the city, state, and private institutions are an important asset to the neighborhood, and that they should strengthen their connection to the community.

- “The people that come through it. If there were services that were required for most communities, as well as eateries in most areas, or the cultural aspect of the area when it’s enhanced are all benefits. It’s like a sleeping giant.”
- “… Now I utilize Dudley, I would use some things. I would get my keys done and get [hair products] here, but the assets aren’t promoted or invested in. I don’t want those to be ignored.”
- “I think the history of this neighborhood is an asset.... I think the intergenerational aspect of this community [is an asset]. Also, the fact that we have an optometrist in the community is a valuable asset and I think it’s great. Also, I grew up when there was a disinvestment in Dudley for so long...I grew up without a lot of what others of you here had. I feel like there are assets it just depends on what you’re looking for. I get my scarves from the Somali shop around the corner. These assets aren’t promoted or there aren’t investments in these assets. I don’t want those to be ignored.”
- “Whether people are crossing paths or interacting with each other is an asset.”
● “One of the things I feel strongly about is that the folks who operate the restaurants in this area, they need to use our people. It bothers me when they come into this building [Bolling] ...you see people from outside of the city.”
● “I think this building **[Bolling Building] is an asset.** I like the fact that it’s in the heart of the Black community and we are the biggest consumers of the schools. I like there being a lot of programs for the kids.... I can’t wait for the library but it’s about time we upgraded it like libraries in other communities. I like that we have a post office here, and there was a long time we didn’t have one.”
● “Location. **The library,** I am excited for it. It has a historic designation as a space and there’s a strong history. Hibernian Hall also is an asset as it’s a cultural center....”
● “Things happening in the **[Bolling Building],** you have the Roxbury Innovation Center, and they offer free computer classes that don’t get talked about enough. You get families here as well in the **[Bolling Building]** and they may change their perception of the area.”

**B. Lack of Diverse Options/Uses**

*Many residents find that the lack of an appropriate mix of retail options prevents them from shopping in the Square.*

● “We had an ongoing joke about what’s in Roxbury. It’s all schools, churches, and hair salons. We don’t have doctors and dentists.”
● “**The food deserts here are so bad in and around [the Dudley Square] area.** I like [business name] and their prices don’t compete with Stop & Shop as they’re a little bit higher. The food deserts in Roxbury, Dorchester, Mattapan are pretty horrific. There needs to be more supermarkets.”
● “But when I was a teenager, there was a printing company and a cleaners and there was Ferdinand’s Furniture and we had [a great mix of retail stores]. They’re all the sneaker places and cheaper clothing [stores]. I was happy to see [business name] come because of their reputation but it’s hit or miss. You can tell the difference and when you came to [Dudley Square], you were here for a while. A Nubian Notion was here, and now there’s the check cashing place, and cheap little stores that are overpriced. **There’s not a lot of service here.** Nothing to stop for.”
● “I too came from the old Dudley, but the bottom line is that Dudley needs to be revitalized. **They need a mix of everything like cleaners and [other shops].** How many people are satisfied with the options here?”
● “When I think of downtown, and thinking about all the things that I go grocery shopping for, you need to be able to get those [items] in the community. When I lived in Georgia, I never needed to leave the community. We have Chase coming to the community but it’s like the fourth bank here. I would love to have an ice cream store here.”
● “More of an evening [restaurant], such as Mission Hill Grille. **There just isn’t an option here to have a drink.** We have a beer hall now, Backlash, but it’s a little out. Having a space where they could be a pop-up with local restaurants could be an evening event. There’s no community board for me to know what’s going on in Dudley Square every night.”
● “To have places that sell subs and grilled items, they are thriving, but nothing really healthy. I have diet restrictions and would prefer to eat here, but there’s nothing available. As I get older, all that heavy, greasy, spicy food is sort of killing me.”
● “**I am not into take-away foods all the time** and would like tablecloth establishments from time to time. If I go out to enjoy myself, I want the ambiance to be appealing and I haven’t found that in Dudley.”
● “The biggest complaint I’ve heard from residents is that there’s no place to sit [at the restaurants].... **My family looks for meals and sit-down establishments.** We haven’t eaten outside of those [sit-down restaurants].”
● “There’s **not enough diversity in the offerings. It’s not a place for people to stop at but they just pass through.”**
● “I automatically go to BJs for certain things for the quantity and it’s something I use all the time. I go to the Stop & Shop because I know the layout. I go to Tropical for ethnic stuff…”
● “The quality of the product is very bad but there’s only a Stop & Shop. I had an event where I had to pick up juice for an Urban League event and the products were all about to expire, and I think a lot of the products in the community need to be improved.”
● “I drive through Roxbury all the time. There’s nothing that is a service that I am able to make use of as Dudley Square stands presently.”
● “I drive through Dudley all the time. People text or call me and tell me about the events going on here, and of course this building is here…. Nothing to stop for.”
● “Right now, I am a walker. I am down here for the post office, the [business name], and I am hoping they grow. I like the concept. Walgreens I appreciate. I don’t live too far so I appreciate it’s walking distance. It varies when I need to come here for whatever I need. I go to the Walgreens near the YMCA because its prices are lower than the one here but I come to community events.”
● “I come often. Most of the time I come, it’s for non-work reasons such as social and community reasons. It varies.”

C. Leakage to Jamaica Plain, Brookline, South End, and Beyond
Residents overwhelmingly appreciate the assets of Jamaica Plain’s Centre Street corridor, Egleston Square, and other business districts. Participants identify the qualities that draw them to these specific shopping districts: diverse options, parking availability, and quality of goods/services.

● “JP and the primary reason is convenience, parking, and diversity. There’s a lot of options to eat, and for example, hardware stores, there are two in JP....”
● “I try to stay in Dudley. I’m in JP and Centre Street. I will go to the drug store there and I like Boomerangs. I go to Chilicates and JP Licks. Most of the eateries there.”
● “I will go to Legal Seafoods or Doyle’s for dining. I like going to Darryl’s or Slade’s in the South End... I don’t go over to South Bay to eat, as I like tablecloths, and napkins.”
● “I like to go wherever, but I go to Mission Hill and there’s a lot of hidden gems in the South End. Egleston. Shopping wise, Egleston has nice things, like tailors, nail salons, and boutiques. We have a nail salon here in Dudley...”
● “It depends. If I were going by myself, I would probably go to Brookline to Coolidge Corner. Depending on who I am with, JP, there are a lot of little neighborhoods redeveloping and they are focused on the food....”
● “I go to Chestnut Hill for the Cheesecake Factory, but I even go to Hyde Park. Sometimes I go to JP.”
● “I do dry cleaning on Centre Street. I go to Brookline and I also...[go to] Washington Park Mall. For shoe repair, I go to Brookline. For shoes, I go to Brookline but nothing here.”
● “Cambridge. There’s every type of shop you can imagine on Mass Ave. Supermarkets, restaurants, Goodwill, Staples. I’m a fan of that area.... I think the student population helps. There’s a lot of diversity there and I really like that. There’s always something new in Harvard Square and things are always changing.”

D. The Physical Environment
Some residents feel that Dudley is a thoroughfare, and not a place to stop. Those who do stop, do so to be connected to community events, as well as the short walking distance to events. There is near consensus among participants that Dudley is not pedestrian friendly and residents offer some solutions to improve that experience.

1. Safety
Residents state safety as a concern; participants feel the current police response is inadequate.

● “I think it’s a waste of money. Police officers have a lot to do and money could be spent in better ways. We have things happening all over the city...shootings should be a priority.”

[Police car stationed in Dudley Square] was never addressed until people from the Bolling
Building were being bothered. People in the community where I’m [from don’t] say anything, they just watch. They see the way the treatment is for different groups.”

2. Improving the Pedestrian Experience

There is a strong desire for improving the pedestrian experience; participants suggest traffic calming, better lighting, and improving the overall physical environment.

- “When you think about Dudley, in the warmer months, it would be nice to have a place to sit outside and have somewhere like the park. There’s no green space in Dudley in addition to trees for landscaping.”
- “There are municipal buildings but why is there no greenery around the building. We need [public art] as well. It would make people want to be in the community and appealing. You look at the police station and the fact that they replaced the trees, they are dead and there are flowers around them. Living in a community is like living in a house and there are things you do to [maintain it].”
- “Just things that make it more people friendly. It’s not just one thing but a bunch of things. Certainly, you need something that makes it pleasant to come down here. I echo your vision of things you’d like to see here. You have to fill in the gaps here and people would come here to spend.”
- “Really creating a placemaking plan for the neighborhood. Where there are spaces for people to be and connect. Outdoor furniture and public art that’s engaging and beautiful. The walkability of the neighborhood around safety, accessibility, and cleanliness. The sidewalks.”
- “The timing of the lights crossing and the missing bricks. I walk, bike, and ride the bus here. You see the elderly struggle here. The public services in place need to be respectful. I’ve called the MBTA about that. We have a community that’s very diverse and representative of the young and old.”
- “Dudley does not have disability structures. When you look at a ramp or an accessible area, there’s a blacktop and it’s awful to see people struggle with it.”
- “I think it would be great to have better lighting in Dudley.”
- “Having a place to sit and relax. I [like to] watch people and hang around. Having it feels more like home versus get-in and get-out. I can sit at Soleil for hours and enjoy myself.”
- “I went to a play there recently. I try to go to places that are accessible. It’s a bit different at Hibernian Hall and it’s not very well lit. I don’t necessarily want to be out too late at night. I am interested in the jazz club that’s opening and should bring more light.”
- “We have a series of buildings that are vacant. If those looked like places you want to walk to, I wouldn’t mind. I would shop at a small business if there were other amenities. The valuable spaces next to the station are empty... I would shop on that block if there were things I wanted.”

E. “A Place for Us”

Some residents speak to the lack of family and community oriented spaces in Dudley Square. They find that most restaurants are take-out with limited options for familial/community dining.

- “I’m just wondering whether the places we like or go, will it influence the notion of Dudley being very ethnic? There’s a need to make sure Dudley stays Afrocentric in terms of the people that live here.”
- “For me, it’s about the kids. We have no gymnastics programs and there’s no places for kids to get training and you can do study programs but the nature of the community makes you not feel comfortable walking to different parts of the area. You don’t go to every street. Lots of kids don’t go to parts of the city. Everyone goes to Dudley, but there needs to be more programs for the kids around art, painting and music. Where the kids go, the parents go.”
- “One part is there being a real value placed on community voice and community experience.... Usually that is the after-thought. The vision is created and then the community voice and their experience is thought about and integrated.... I think that the approach should be different in
I’m always sitting at the table…. I’m usually the voice for the community but I’m only one person in the community with different experiences. We can’t represent everyone. So, gathering and figuring out how to gather that information is a challenge. What I hear consistently is that people want to have a sense of belonging and that where they live is important.... You can say these are the things that I want...but if the police aren’t responding to your calls in your neighborhood or your employer isn’t listening, then you’re not going to be able to affect change.”

- “The [Bolling Building] has the room on the sixth floor and that should be more advertised. They raised the cost in the last two years and it should be available for birthday parties and receptions. In the Urban League, we use it for events we have but there needs to be places for birthday parties and showers. People need to feel that the community is for them and that there are spaces for any activity they have.”
- “I like there being a lot of programs for the kids. I would like to see the contracts and the people who work here represent the community.”
- “In terms of being able to find a space that serves multiple purposes whether it’s for family dining, social gatherings, we don’t have that in the neighborhood. I would like to have the [business name] times ten, because I think that diversity lends for a variety of things to happen in the district. I think space is also an issue. Each of them are so different and it’s about your preferences. Sometimes I want a patty, soul food, or a Haley House cookie. It’s something that connects with my identity, living and growing up in this neighborhood.”
- “I am not into take-away food all the time and would like tablecloth establishments from time to time. If I go out to enjoy myself, I want the ambiance to be appealing and I haven’t found that in Dudley.”
- “I liked what they [business name] did with retraining returning citizens. I hope I can contribute to its reopening which is moving in that direction because I think beyond the food, we need places that do several things such as meeting. I see that more and more in Upham’s Corner than I do in Dudley.... I come from a time when Dudley was hopping! You had Blair’s Foodland and Woolworths, but to see it where it is now is pretty shameful.”

F. Parking
The parking in Dudley Square is less than ideal and often leads to residents exploring other commercial districts with more (or more convenient) parking.
- “One of the reasons I go to Brookline and JP is that I can park my car and everything is right there.”
- “We need some kind of parking mechanism such as meters or a lot.”
- “I can usually find a spot but it’s rough. Looking at JP, they have about three lots.”
- “If we’re losing parking spaces, we need to connect with business owners on their parking.”
- “I think around the engagement especially with meetings here that people won’t show up because they know they won’t find a parking spot. Even the spaces that were little secrets are gone. Something needs to really be done about the parking because it limits shopping but also people engaging here.”
- “I have a friend who likes [business name] and there’s often no place to park. It deters you from coming to Dudley. How many spaces are there for the handicapped? It’s a deterrent for those. If you have kids in your car, you can’t find a place to park and you’ll go somewhere like South Bay. They have all the stores as here and there’s parking.”
- “JP. And the primary reason is convenience, parking and diversity. There’s a lot of options to eat, and for example, hardware stores, there are two in JP. You have options and parking and it’s a habit.”

G. Need for Weekend and Evening Community Events
Residents are supportive of more community events that bring together local businesses, residents, visitors, artists, and other creatives.

- “I would like to see outdoor events that happen here. Things that bring people out. I would like to see a Dudley Square market happening year round. I would love to see something connecting the history and culture of the neighborhoods happen more regularly. More outdoor events that are family friendly.”
- “One of the best ones I’ve attended was one [TACC] was involved in with the arts. The turnout was great. I’d like to see more events supporting the arts and our history. People are going outside the community to find connections and people aren’t tapping into it. I think if people sat and thought about it, there’d be a lot of different celebrations of people, places, and things around here. To find connections, we have serious connections here and people from all over. The diversity is crazy and we’re not doing the kinds of things we need to do in order to celebrate that diversity.”
- “Certainly, street festivals. Music and film festivals. I’d like to see some kind of street festivals with music and arts sort of like Beantown.”
- “It would be great to have an annual event, but something as simple as sitting down with some friends, listening to music and talking would work. That’s one of the things we need and we need a variety, not just one. My friend lives near the waterfront, and they have events where they bring in restaurants and do sampling and they do fireworks. It’s just the everyday things that make life easy and offer the opportunity to relax. Anything in another community, that’s what we want here.”
- “[Business Name] was great in trying to bring some level of activity for Halloween. That was amazing, but because we went to JP, the whole district was participating in the festivities. They had the haunted house and businesses all got involved with that. It would be great to do that in my own neighborhood. This neighborhood should be enlivened during the holidays. A lights or winter festival. It brings vitality to the district. Whether it’s the holidays or kicking off the fall season. We’re in a neighborhood where there were orchards, and it would be nice to have family friendly events happen in the neighborhood where young people could learn about the history.”
- “Maybe a concert or local talent offerings. If there’s something where people could bring friends.”
- “SOWA. I was trying to do a Dudley SOWA. It’s very animal/family friendly.”

H. Clothing Resists Online Shopping

The focus group participants have mixed views about online shopping. Many purchase clothing in person while they are more likely to purchase other items online.

- “Most things I purchase online are household items or gifts. I like to see my clothes before buying them so that’s when I go into a retail store.”
- “I do some online shopping but I like to see articles in person, especially clothing. When I buy something online and like it, I like to stick with it.”
- “I don’t do a ton online. Sometimes I see a piece of clothing, or shoes, or books that I’ll buy.”
- “I do a lot of online shopping. I think we would benefit from a locker where we could get things shipped. What I find is that when I used to live in Allston, that was an excuse to stop and get a coffee or donuts. It was a purchase opportunity as a consumer.”
- “I try not to. I like dealing with human beings. I’d rather go to a gas station and pay someone to pump my gas. I would not want to feel like I’m taking someone’s job by relying on technology.”

I. Recommendations for Complementary Businesses

Residents have extensive knowledge of surrounding business districts, and recommend both specific businesses, as well as types of uses that should come to Dudley. Retail and service recommendations include a hardware store, shoe repair, dry cleaning, toy stores, pet stores, handmade goods, and flower
shop. Restaurants/dining suggestions include bakeries, ice cream shop, cafe/ breakfast spot, pizza, bars/pubs/late night dining, and a wine shop.

- “There’s a houseware store [Kitchenwitch] near the Purple Cactus [in JP].”
- “Boing, Flour, Upper Crust Pizza.”
- “Milkweed in Mission Hill. They have a good mix of breakfast, lunch, and dinner but can also have wine and beer. It serves the need for any little event.
- There’s a place called Giselle’s who does flowers out of her house. Julie’s Frozen Dessert in East Boston. The store has a mix of South American candies. I think we could have a place like that here.” “Lotus Flowers, before Jimmy retired.”
- “House of Culture on Columbus Avenue…. We need a Victoria’s Diner…. If there’s something at night that would be great to go.”
- “A good pizza place.”
- “Natalie’s in Fenway and they have wines from all over the place. You can rent out the space for a price and they’ll set up cocktail spaces.”
- “A good wine shop.”
- A pet store with a grooming store or dog wash.”
- “Zena’s store allows you to buy local community handmade items and it would be great if there was a shop dedicated to selling these types of items.”
- “They need a mix of everything like cleaners and [other shops].”
- “We have Chase coming to the community but it’s like the fourth bank here. I would love to have an ice cream store here.”
- “More of an evening attraction, such as Mission Hill Grille. There just isn’t an option here to have a drink. We have a beer hall now, Backlash, but it’s a little out. Having a space where they could be a pop-up with local restaurants could be an evening event.”
- “If I wanted to buy art supplies or something to be creative, I have to go to South Bay. If you can encourage someone to do that… it’s the arts district of the city and my friend wants to do dancing stuff and there’s nowhere to have it outside of churches.”
- “Cleaners I go to Grove Hall. I have a guy that picks up my laundry (Grove Hall Cleaners). Pricing is great because it takes the pressure off of me to physically take it.”
- “I go all over the place for a cobbler. That’s something we desperately need.”
The business focus groups held in Dudley Square on October 30 and November 6, 2019 yielded a range of themes, some of which will be familiar to those who know the area. Overall, the business owners are very connected to the community and want to see Dudley Square thrive. However, businesses feel the impacts of speeding vehicles, loitering, dim lighting, open drug use, and vacant/grated storefronts as impediments to attracting both employees and customers.

Businesses voiced a strong need to maintain the community’s ethnic identity and to support the expansion of that identity. Importantly, participating businesses feel the pressure of increased residential speculation on their market, but have yet to see significant increases in sales. This leads to their overall support of new mixed-income development, yet apprehension remains due to fears of increased interest by corporate chains. Business owners suggest it is their unique circumstances (low-cost lease, etc.) that allows them to stay in Dudley Square in the current economic environment.

The lack of attention to the physical environment (grates, vacancies, sidewalks) and the need to invest in job seekers, specifically job readiness/soft skills, are significant concerns; all participants agree that these elements need to be addressed to make the business district welcoming to visitors. Additionally, businesses agree that the overarching theme of paramount need is improved marketing. Marketing needs to occur through multiple channels including: Saturday and evening community activities, signage, lighting, social media, traffic calming, as well as better connections between the existing businesses in Dudley Square to promote each other and local events in the area.

The key themes and related quotations from participating businesses below provide additional detail and a vision of an ideal Dudley Square through the eyes of the current business community:

A. Activist Ownership
For several owners, the impetus for moving their business to Dudley Square comes from a desire to improve and enliven Dudley. Many owners have personal histories that connect them to the Square emotionally.

- “What created the opportunity to have my business was that this community embracing me. Mel King and the field embraced me and fought for rights and equal opportunity. They weren’t giving me the same opportunities in West Medford. There were true minority people here wanting to help me...I’m very supportive of the Dudley Main Streets and the things that make this place what it is.”
- “[I] know the history of Dudley and when the opportunity came, I wanted to be a part of this. We had a restaurant in Grove Hall in 1996 and for me it was a reflection of happy times with my mother and being a part of something – a new vision.”
- “We’ve had offers to leave but it was never a thought to leave Dudley.”
- “I’ve been in Dudley all my life and thought it would be a good idea...It was more of that being in Dudley.
- “It’s family run, and we wanted to choose a place where we had roots.”
- “I’ve always had a relationship with Dudley, with my first memory and touch point being A Nubian Notion. It was where we would go for black people stuff. I came out of a career in retail management...[we] were intentional about the challenge before us. Something that would be unique for the neighborhood...It didn’t start off as reigniting the community...”
- “It made sense to do something in our community especially for us by us.”
B. Family/Community Oriented
Participants see a need to push for more black- and minority-owned businesses and to provide spaces for and by the residents of Roxbury that reflects their tastes. Businesses need to be rooted in the community to be successful in the age of Amazon.

- “The ideas need to interface with the existing community and for the new folks coming into Roxbury. I think that’s why Tasty Burger just wasn’t a good fit at the time.” “A...mom and pop burger shop however would be more niche and creative.”
- “It’s difficult because you’re competing in the era of Amazon. You have to be connected in certain ways to the community.”
- “Even when I go to DC or Brooklyn there is stuff for us and we don’t have that here... [we need] brunch and restaurants...places to walk and have a drink or just sit and listen to music.”
- “We grew up in an age where households were more stable and there were more black owned businesses. A Nubian Notion was always the staple store you would come to. Music was a big thing...children’s books came from A Nubian Notion. Getting a sub at Joes or going to Spinale’s. The library was always a place for us. You could hang out and wait for your parent to come pick you up.”
- “I think for me, it has to be more. I need to know who the owners are. I’m tired of people opening a business here where people are taking their money back to Quincy. I take my cleaning to Jackson Square. Need some good and healthy eateries.”
- “All of the franchises will want to get in and as a small shop, what will happen when those come in. How would we brand up and market up the businesses here.”

C. Negative Impacts from Perceptions of Dudley
Businesses face challenges to hiring and attracting customers as a result of the negative perceptions of Dudley. While participants agreed there was some validity to these perceptions, some found them to be exaggerated and outdated.

- “The perception and reality of Dudley. Sometimes that perception is reality. We’ve had two long-term employees and they’re appreciated. There’s a safety concern.”
- “It’s been hard to get people to show up for interviews. It’s the generation. The market as well. The image of Dudley has to do with employment. It has to do with what they’ve heard or see.”
- “I grew up in a generation that didn’t allow me to go to Dudley unless my elders were with me. The El was there. It’s those over the age of 45 that discourage people from doing business here. There’s the idea that there’s a “Dudley Standard”...The people saying things are basing it off things that happened 20-30 years ago. We don’t have a problem getting people from outside the community but we need to build the community. Once we can reeducate the group between 45-65 and let them know they could come back here, the younger people can’t come back down here.”
- “We met with [Business Name], and they kept mentioning safety. There’s a perception and a reality and both. There’s an epidemic that’s been allowed to run rampant in our community. There was positive flow when we first opened. ...but as time has passed it’s like we’ve gone backwards.”

D. Improving Business-to-Business Connections and Marketing
Owners seek to increase business-to-business interactions in the Square, both transactions and marketing. Some saw this as an asset and the strongest reason to remain in Dudley.

1. Business to Business Connections
- “That’s what I need help with. Getting some support from the City to work with major management companies to shop local and give my company a chance.”
- “We open on Saturday and are one of the only businesses open. There are events there but not enough conversation about the businesses there...people don’t do the whole walk around thing. There are many businesses but people don’t know they’re there.”
● “What comes with those developments is telling the residents to support what’s local. We won’t want to see people come here to sleep and drive somewhere else.”

● “I love [Business Name]...however it becomes the only destination in Dudley. I’ve had people walking by saying we come here all the time for [Business Name] and say that they didn’t know we were there. I send people to other boutiques and [Business Name]... I’ve had customers weekly say that they didn’t know it was a black-owned business...that’s an image problem and people being educated that there are businesses of color that employ local residents. We have to address it.”

● “Some people come from the Court and I’ve gotten a few more officers. I hosted...a couple nights ago and there was a shooting nearby. I wanted to get more business from the nonprofits and other businesses but many don’t want to walk through Dudley Square.”

● “There’s a lot of foot traffic in the lobby [of the Bolling Building] and if there were signs with the names of the businesses that would help.”

2. Marketing

● “As long as we can be a part of it, with all the residential buildings, there needs to be a marketing kit from Dudley Square inviting them and helping people find their way around. We should talk to management companies and different groups to create what people want to see in those things.”

● “That requires work from the City and business owners...and has to be more positive than negative. It’s harder to work toward something positive and we have to figure out solutions. People are so frustrated with Dudley that they only talk about the problems.

● “You don’t have to have everything be new...There’s plenty of available spaces...but this community has been allowed to rot for 50 years. Retail is different...when white flight happened and when all the malls took up our space. Have to think about what success is out there and bring that into our district so we’re not left with places like Payless.”

● “It’s all points. Wherever you’re coming from. Other neighborhoods have an entering sign to say you’re here...but it would have to be something unique. Something that lets people know that there’s a center...”

● “The issue of parking and bathrooms. Signage for the businesses is really important. It should say welcome to Dudley Square. Letting people know where parking is. There’s city signs letting you know where there are public restrooms or parking available.”

E. The Physical Environment/Public Realm

When asked about important neighborhood/site characteristics, the owners agree that the high traffic volume can hurt business in Dudley as vehicles speed through and the area is used as a thoroughfare and not a place to stop and walk around. Business suggest traffic calming and marketing through signage as solutions.

1. Safety Concerns

The owners agree that safety is of concern and has a major impact on business due to loitering, drugs, etc. Participants suggest solutions such as increasing beat cops and decreasing use of police lights to create a calm, welcoming environment.

● “At my location, there’s loitering. There could be more beat cops and I don’t want more harassment but I would want to see friendlier police outside the station. To keep people moving along. You need it to a degree now and there needs to be some more sensitivity training with the police.”

● “Some of the things we need are more police, but when walking with the businesses, I learned that there are two beat cops and that’s not enough to help create the environment we want. The drug use and the policies around drug use, vacancies, and homelessness are not in sync with what the community is experiencing. The policy toward them is not in a way that prevents them from coming to Dudley Square and it’s driving business away.”

● “It’s like a war zone with the [police] lights and you get that feeling. It bothers me.”
● “I get that it’s mental health and addiction. Every other week, I get cursed at inside my business, and who wants to come back and experience that environment. I had someone in front of my business with an open bottle...I think the police officers need to come out of these cars and walk.”

● “Some people will see it and not stand in front of my business. Others will see a police car and wonder what’s going on. The loitering and things that have happened have moved but they are still there. I see needles and blankets and there’s a [park] near us that people gather.”

● “We all know the video that went out and residents and businesses called City Hall...The car will sit there in front of Citizens Bank and 90% of the time they’re in the car.”

● “There’s an epidemic that’s been allowed to run rampant in our community. There was a positive flow when we first opened...but as time has passed it’s like we’ve gone backwards.”

2. Traffic Calming
Business owners agree that the high traffic volume hurts business as speeds are high and the area is used as a thoroughfare and not a place to stop and browse.

● “I think Dudley is uniquely located because we have access to South End and JP but people don’t stop. There’s a lot of people that come through whether it’s driving or on the bus. We have the flow of bodies...People are just coming through and don’t know what’s here. It doesn’t let people know that there’s shops there.”

● “Where I’m at, we need crosswalks for people to cross and get into my building. Public signage. There’s a button push and kids are coming down the street but there’s nothing to control the traffic.

● “It’s so busy on Washington Street and it’s so fast that you’re not going to see the business without stopping. If I’m driving down Washington Street, you can’t see to the right or left or the signage...As a businessperson, when you cross over Melnea Cass, you keep going [so] as to not crash.”

● “The speed at which people come down the street is insane.”

● “Dudley Square isn’t a destination location but more a transit location and people will just browse and leave.”

3. Improving Pedestrian Experience
There is a strong desire to create a better pedestrian experience, to increase foot traffic, using multiple strategies (e.g. traffic safety and lighting, decreasing grates on vacant buildings, artwork, etc.).

● “You need foot traffic after 6 p.m. To get people, you need to have people. If the street is empty, you don’t feel comfortable being the only one. [I] would love to be open after 6 p.m., but there’s no one here.”

● “You see a grate on the property and it’s not aesthetically pleasing. It’s disappointing to see...Upgraded signage would be great if they could get in with the sign program at the city.”

● “When you’re walking down the street after 6 p.m. past Washington Street and it’s dark, there’s not much open and well lit.”

● “If the place on the front of the Bolling Building were there, it would be a beacon of light.”

● “Lighting is a big issue. When you come here at night, it’s really dark and doesn’t encourage people to walk around. We’re tired of...the space next to Walgreens... It’s an eyesore. Even if they painted over it, that would be nice. Crosswalks are really important.”

● “If we could plug in Dudley and have the whole thing lit up, it would be so much better.”

● “Sidewalks need to be improved but amenities like landscaping and beautification need to be improved.”

● “With art, you have to change the brand and environmental state for people to see the district as walkable, inviting or safe.”
In my head, I’m walking down West Broadway in Southie…they’re thriving…they have a dentist, a bakery, little restaurants. There’s no vacancy and it looks nice. One Saturday it looked nice and we went and walked around there.”

“One of the issues here in Dudley square is the mix of things that are on the ground floors. **You can’t have nonprofits be on ground floors.** The schools are stopping cannabis businesses from opening up here. There needs to be more micro-spaces. It’s never going to work the way it is right now. You have to get artists in here. You have to get students…the key drivers…those coffee shops…not just those sit down coffee shops.”

**F. Parking**

Most owners agree that parking is a serious issue, arguing that the spots are often in inconvenient locations, turnover is low and the lack of parking leaves customers circling around for a long time looking for a spot. The Blair lot should be accessible from Washington Street.

- “Some customers Uber. Most drive or walk. **Parking is definitely an issue**…people circle and take an extra 10-15 minutes. I park on the street, and when I get in [later], there’s two hours of when other employees get in. I usually park in Orchard Gardens because there’s space but I will usually park immediately to get to my store.”
- “I have spots parallel to the side of my building and I have employees park on the street to have customers there.”
- “**Parking is an issue I hear all the time from customers** but one employee drives and the rest take public transportation.”
- “I take the bus usually, but will park in the lots for the Chinese restaurants. I hear a lot about parking from our customers. I take the bus because I got many tickets being on Warren. For customers it’s a big issue.”
- “We are fortunate to have a parking lot. We get tickets for some people trying to poach our parking spaces…When people want to come in, they have to circle around and can’t quickly come in from the South End. There’s a huge lot, the Blair lot, and it’s all fenced in; when you drive down Washington Street, the gate is locked. If I were in front of that building as a store, I’d be pissed. You have to swing around the back and the lot is very visible.”
- “We have 130+ rooms. We thought that people wouldn’t drive much but we’re seeing a lot of driving. More than 50% and all of the employees…it’s tough. They complain about it but we offer them some alternate solutions. **No one ever says they’re not coming back because of parking.”**
- “We don’t have parking and I’m upset as a business owner. I’m upset since the city decided to earmark parking for the school workers…. There’s a hairdresser on the block of Citizens Bank and you can’t get your hair done because you can’t park.”

**G. Employee Soft Skills**

All of the business owners state they have issues with new employees lacking soft skills (communication, dress, etc.) and that they are more successful training employees in hard skills.

- “I would recommend not going to a job interview not looking or smelling like you’ve just come from a party. We all have the same challenges. I don’t think anyone would say they don’t have that problem but it’s a larger issue than perhaps what we’re looking at here. We hire them and train them, and outside of that core group of 15-20, the longevity is between a year and year and a half but some turnover within weeks.”
- “Most people don’t have the soft skills for the job – **how to conduct yourself for an interview, being on time.** It’s the soft skills that really pin people up. **Hospitality is key in the food industry.** You don’t have your personal conversations in front of customers. The training is part of not being ready for the job, and if there was a place for soft skills to be implemented I would like that. I can teach people how to cook, but there are hurdles with the other things.”
- “**There is a need for a training center.** Many people come in and ask questions about hiring. **It’s soft skills.** The ordinary hello/how are you doing, there’s a need for that. I don’t know if it’s this community because I don’t interview and see where they’re coming from but it’s there.”
● “Soft skills, plan, prepare, execute. I’m in a customer service base and preparing for work and how to get there are big. Many I see have records.”
● “Soft skills are a major issue. The ability to talk to customers and supervisors. People show up in ripped jeans and t-shirts and it’s deplorable.”
● “There’s a need for ESL and we’re doing management training to provide them with skills for raises and promotions.”

H. Support for Outdoor/Evening Family/Community Oriented Events
Participants discussed the issue of remaining open during the weekends and a desire to expand their hours into the weekend and evenings. This was not universal, as some had strong sales on weekends (sector dependent). Several owners indicate a desire to participate in events in the Square, and suggest specific ideas such as a Jazz festival, a movie night, and a farmers market. They also mentioned issues with current weekend/community events that didn’t draw neighborhood residents or had a limited spending impact on Dudley Square.
● “Because we’re not staffed fully, I am not open on Saturday. We didn’t have enough sales to open then. I would like the opportunity to be open on a Saturday and receive the benefits from when there are events on the weekends.”
● “We have events on Saturdays but we have game nights at night. Many people come through Dudley but not many shop here.”
● “Most people who came to that...[the Boston Book Festival] were from outside the neighborhood. It was mostly white people there. One thing we tried to impress upon them [Boston Book Festival] is that the culture is different on Sundays. Most people go to church and we wanted to let them know the event may not fare as well on Sunday but it did. When it was on Saturday, there was more local presence. The biggest complaint was that there was nothing to eat or open to eat... On the weekends it is really trashy around here. I cleaned the street around me then.”
● “Jazz festivals like the South End. When Darryl [Settles] first came up with the idea to have a festival in the street, it was interesting. Something that makes people think that they’re being seen.”
● “In Codman Square, there are movies and farmer’s markets. Many young people come and play and are outdoors.”
● “I loved the book fair, more educational things. Cultural activities such as women’s group empowerment events. Fairs, family activities. One thing that was successful was when we took over the parking lot and held an event. It’s just us believing in what we want to see and making it happen.”
● “Having events that bring people in bulk is nice. Getting the restaurants to do a food tour or something like that. An outdoor music event in the summer. I participated in Nuestra’s event at Bartlett Yard as well. Having youth and children events to get the adults out.”
● “I think the work ahead of us has to be so intentional that the community has to change. There’s thought that it is what it is and not what it could be. Planning intentional events so residents will come out and elders will come out ...That requires work from the City and business owners.”
● “I think the summer had some fun events. Michael Bivins of New Edition...and that was very lively. The crowd and celebrity and feel you get is spectacular.”
● “There are events that could happen...it’s a matter of marketing and understanding who the demographic is. I’m really about the resident led initiative.”

I. Leasing Environment
Some owners describe their ability to stay in Dudley Square due to low rent tied to exceptional situations. Owners express concern over the speculative increases in rent that do not match the realities of Dudley Square today.
● “My circumstances are different and I was there before the new landlord and I bid against them [to purchase the building] but there were financial challenges to getting the building. The
landlord raised the rent three times but now the **new landlord has promised not to raise the rent while I’m there**. I pay about $40 per square foot.” “If I had one wish, I wish I had some security. The owner said as long as I’m there, he wouldn’t raise but he could sell the building at any point.”

- “We’re in somewhat of a good situation. It’s cheaper than at our [former location]. Even in the three years we’ve been here, it’s still cheaper. For 15 years, I have the option to be there and it increases each year. Even with that, it’s still cheaper. **Not until the tenth year will it equal what we used to pay.** We pay about $20 to $21 per square foot.”
- “I’m negotiating my lease now. I think a lot of landlords are looking at real estate without context or hoping to reap the benefits of Dudley.”
- “Madison Park doesn’t want to do the office space out of fear of a lack of tenants but it keeps us impoverished and not able to scale up. A **sliding scale or fee rental agreement** is what would assist people to be in these spaces.”

J. People as Assets

Some business owners think younger people should be in more positions of leadership as they are the ones to likely support these businesses, and make the neighborhood ‘cool’. There is sentiment that the youthful presence around Dudley has been lost and it has hurt businesses. The intergenerational aspect of the neighborhood is seen as underutilized potential.

- “**The leadership in the community needs to be more of a baton passed leadership.** Politicians that have been in their positions for 30 years, and its disjointed. It’s very difficult when you don’t have some of the things you mentioned, like an entertainment license...The youth energy is going to move us forward.”
- “**You want the cool things, you have to have artists and students.** The key drivers like coffee shops but things that are bustling like the Flour bakeries. It has to be someone from this community.”
- “It’s those over the age of 45 that discourage people from doing business here... The people saying things are basing it off things that happened 20-30 years ago. We don’t have a problem getting people from outside the community... [Unless] we can reeducate the group between 45-65 and let them know they could come back here, the younger people can’t come back down here.”

K. Support for Development

Some of the owners have positive feelings towards the new mixed-income developments and the potential increase in customers with disposable income. Some argued that there is too much residential affordability in the new developments due to Dudley’s high concentration of subsidized units. Additionally, some owners are concerned about corporate chains renting on the ground floor and consuming this new customer base and want to see support for local retail growing into these spaces.

- “It’s probably going to take gentrification and people moving in. I think once more people come to live here, it will change who lives here and the type of businesses that come here. People don’t want to walk a mile for something to eat.”
- “For a retail shop, **Thursday through Sunday should be our busiest days but they’re not.**”
- “I do have plans to expand at the location I’m at. **I want to include dinner but would also need to have guests with more disposable income.**”
- “**The parcels that are coming I would embrace.** Everyone tells me to hold on but no one has a business to just hold on. I have to survive in the climate that’s here. To open up at night, Dudley is not a destination, and I want to have cocktails and other apps. I want to see the development.”
- “The 30/30/30 model is no longer going to work. If you have developers dependent on low income tax credits, like CDCs, we end up with more of the affordable housing than wealth creation opportunity and perhaps not having...[adult children] move back into the community.... When you’re entrenched with 70% of the population on the lower end of housing, **you need to be deliberate on offering market rate housing and folks who can support business.**”
- “Until we’re tied to not having a restricted income mix, we won’t have the traffic.”
L. **Recommendations for Complementary Businesses**  
Business owners were asked to identify either specific businesses or the type of business that would complement the retail mix in Dudley Square.

- “We need more spaces like Hyde Square in JP”
- “Fitness Center, coffee shop, nail salon, everyday things. Restaurants, places for lunch, dinner, if I want to grab a cocktail after work.” [Millennial participant]
- “Oasis Vegan, Trader Joe’s, Bread Gourmet, bakery, little restaurant like on West Broadway.”
- “You’re not going to get a Tasty Burger to be supported here. A... *mom and pop burger shop however would be more niche and creative*. I like the optical shop.”
- “More places to eat and there’s a need for [restaurants] after 3 p.m. You get tired of steak and cheeses and pizza. [Business Name] is opening up soon but when there’s more selection, there’s more business.”

   ( ) Business & Professional Services
   ( ) Dining/Restaurant
   ( ) General Retail Shopping
   ( ) Government Agency
   ( ) Grocery Store/Market
   ( ) Hair Care & Beauty
   ( ) Health & Wellness Services
   ( ) Nonprofit Institution
   ( ) Wine & Spirits
   ( ) Other - Write In: _________________________

2. Are you a resident of Roxbury?
   ( ) Yes
   ( ) No

3. What is your age?
   ( ) less than 16 years old
   ( ) 16-17 years old
   ( ) 18-24 years old
   ( ) 25-34 years old
   ( ) 35-44 years old
   ( ) 45-54 years old
   ( ) 55-64 years old
   ( ) 65-74 years old
   ( ) 75 years or older

4. What is your total household income?
   ( ) Less than $10,000
   ( ) $10,000 to $19,999
   ( ) $20,000 to $29,999
   ( ) $30,000 to $39,999
   ( ) $40,000 to $49,999
   ( ) $50,000 to $59,999
   ( ) $60,000 to $69,999
   ( ) $70,000 to $79,999
   ( ) $80,000 to $89,999
   ( ) $90,000 to $99,999

   ( ) $100,000 to $149,999
   ( ) $150,000 or more

TRANSPORTATION AND PARKING QUESTIONS

5. How do you typically get to Dudley Square for work? Select one:
   ( ) Walk
   ( ) Drive
   ( ) Take public transportation
   ( ) Drive/take public transportation equally
   ( ) Other - Write In: _________________________

6. How important is access to parking to your working in Dudley Square?
   ( ) Not at all important
   ( ) Slightly important
   ( ) Moderately important
   ( ) Very important
   ( ) Extremely important

7. How important is access to public transportation (MBTA, buses, etc.) to your working in Dudley Square?
   ( ) Not at all important
   ( ) Slightly important
   ( ) Moderately important
   ( ) Very important
   ( ) Extremely important

8. How important is access to parking to your shopping or buying services in Dudley Square?
   ( ) Not at all important
   ( ) Slightly important
   ( ) Moderately important
   ( ) Very important
   ( ) Extremely important
9. How important is access to public transportation (MBTA, buses, etc.) to your shopping or buying services in Dudley Square?
( ) Not at all important
( ) Slightly important
( ) Moderately important
( ) Very important
( ) Extremely important

SATISFACTION WITH RETAIL OFFERINGS IN DUDLEY SQUARE
10. How satisfied are you with the available selection of retail offerings in Dudley Square?
( ) Very Dissatisfied
( ) Dissatisfied
( ) Satisfied
( ) Very Satisfied

11) How satisfied are you with the quality of retail offerings in Dudley Square?
( ) Very Dissatisfied
( ) Dissatisfied
( ) Satisfied
( ) Very Satisfied

12) How satisfied are you with the price of retail offerings in Dudley Square?
( ) Very Dissatisfied
( ) Dissatisfied
( ) Satisfied
( ) Very Satisfied

MEAL PURCHASES
13. During your work hours, do you purchase any of the following meals? Please check all that apply.
[ ] Breakfast
[ ] Lunch
[ ] Snacks
[ ] Dinner
[ ] Other - Write In: _________________________
[ ] I don’t buy any of my meals during the workweek

14. During your work hours, how often do you buy meals?
( ) Once a week
( ) Twice a week
( ) Three or more times a week
( ) I never buy meals during the workweek.

15. During work hours, how much do you typically spend on meals?
( ) $0
( ) $1-$10
( ) $11-$25
( ) $26-$50
( ) $51-$75
( ) $76-$100
( ) More than $100

16. During your work hours, how often do you typically buy your meals in Dudley Square?
Select one:
( ) Never
( ) Rarely, less than 10% of the time
( ) Occasionally, about 30% of the time
( ) Sometimes, about 50% of the time
( ) Frequently, about 70% of the time
( ) Usually, in about 90% of the time
( ) Every time

17. During work hours, how much do you typically spend on meals in Dudley Square?
( ) $0
( ) $1-$10
( ) $11-$25
( ) $26-$50
( ) $51-$75
( ) $76-$100
( ) More than $100

18. During your work hours, where do you go to buy meals outside of Dudley Square?
Check all that apply:
[ ] Allston/Brighton
[ ] Back Bay (Copley Square, Commonwealth Ave. Mall, Newbury Street)
[ ] Beacon Hill
[ ] Braintree/South Shore Plaza
[ ] Chinatown/Leather District
[ ] Dorchester

Appendix C: Cluster Analysis

Identifying the factors that support existing businesses and those that are instrumental in attracting new businesses are key to understanding the assets and barriers to maintaining and expanding the commercial base. Additionally, knowing the stakeholder needs provide a clearer understanding of the potential and issues facing Nubian Square.

Clusters are groups of closely related and interconnected businesses that operate within a specific geography and benefit from their geographic proximity. The companies operating within a cluster are connected by a shared workforce, supply chains, and technologies. Clusters can have a significant impact on the survival and growth of small businesses (Delgado, Porter, and Stern, 2010; Kuah, 2002) and well-designed cluster development strategies can further stimulate startups and job growth (Chatterji, Glaeser, and Kerr, 2013; Muro and Fikri, 2011).

Strong clusters in a particular geographic area are those in which that area specializes. Table 1 provides a list of Nubian Square’s strong clusters and are those that make up a higher percentage of total employment in the Square than in the city of Boston as a whole. Strong clusters are important to identify because they identify Nubian Square’s competitive advantages as compared to the rest of the city. For purposes of this analysis, Nubian Square is defined as the area within a 0.75-mile radius of the Bruce C. Bolling Municipal Building, located at 2300 Washington Street.

Table 1: Strong Clusters in Nubian Square (2019)

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

There are nine strong clusters in Nubian Square, with five of those categorized as “very strong” (those with a location quotient greater than 1.5). Distribution and Electronic Commerce, which includes warehousing and storage, wholesale goods, and electronic shopping, is very strong in Nubian Square. Local Health Services, which includes hospitals, healthcare provider offices, and drug stores, is also very strong in the area. The strength of this cluster may be due to our geographic definition of Nubian Square. Parts of Boston Medical Center and the Boston University Medical Campus lie within the 0.75-mile geographic radius. The strength of the Biopharmaceuticals cluster may also be explained by our geographic definition.
Other strong clusters in Nubian Square include Local Education and Training (including elementary and secondary schools, job training, and recreational services), Local Community and Civic Organizations (which includes social service, religious, and labor organizations), and Local Real Estate, Construction, and Development (which includes real estate services, contractors, and other construction-related activities). Environmental Services, which includes waste processing, collection, and management services, is also very strong in the area.

Important to note from this analysis is the absence of retail-, hospitality-, and arts-related clusters from Nubian’s Square’s identified strong clusters. Business owners, employees, and residents frequently identified these types of businesses as much needed in the area. The Local Hospitality Establishments, Local Retailing of Clothing and General Merchandise, Performing Arts, and Local Entertainment and Media clusters were all relatively weak in Nubian Square compared to the rest of Boston.

The following document includes maps of the lease/ownership mix of retail businesses in the Nubian Square area. Maps 1-3 feature icons for each type of business featured in Nubian’s retail market. These maps also include an outline of what is typically considered the Nubian Square neighborhood.

Many of the retail business spaces in the Nubian Square area are leased. There are few self-owned business spaces in the neighborhood relative to the leased business spaces. We discovered that the self-owned businesses tended to cluster near the northern edge of the Nubian Square neighborhood near Malcolm X and Melnea Cass Boulevards.

Figure D.3: Jamaica Plain-South Suffolk Submarket

Figure D.4: Longwood Medical Area/Fenway Submarket
Figure D.6: South End Submarket

Figure D.5: Brookline/Newton Submarket
Appendix E: Comparative Analysis: Comparative Business Districts

The following memo presents the results of demographic, housing, business, and real estate market data compilation and analysis for Nubian Square as compared with other nearby commercial districts including, Egleston Square, Ashmont-Fields Corner, Hyde Square-Jackson Square, Mattapan Square, and Brookline Village. The commercial district comparisons were selected by the Study Team for the express purpose of highlighting the interplay between the business mix and localized demand expressed in each location and to assess related differences and impacts associated with the underlying business and real estate economics of each.

The Study Team determined that the comparative profiles of consumer demand and business mix for each of the competitive commercial districts would be defined by a 0.75-mile radius of the center of each area, reflecting the approximate size and customer walk zone for each district. In the case of Nubian Square, the Bolling Building, at 2300 Washington Street defines the center of the radius. In the others, MBTA station locations were used. Although data were also collected for an area defined by 1.5 miles of each center point, for purposes of the demographic and business profiles, the 0.75-mile radius was determined to best define the areas’ characteristics.

Real estate assessments were also undertaken for each of several commercial sub-markets, defined to capture the competitive perspective of real estate owners and tenants, rather than the perspective of retail consumers/customers (the district walk-zone). To this end, both office and retail real estate market analyses were conducted for Metro-Boston overall and for the Roxbury/Dorchester, Jamaica Plain/South Suffolk, LMA/Mission Hill/Fenway, South End and Brookline submarkets. A comparative summary of the commercial market features of each submarket in relation to Nubian Square is presented by this memo. Full market presentations for Metro-Boston and each submarket have been downloaded to the Shared Document Folder for future reference.

Comparable lease studies further narrowed the analysis to capture specific rental activity and pricing within the commercial corridors running through each competitive district under study, providing a more nuanced picture of the competitive analogues from a real estate perspective. The corridors analyzed include: Columbus Ave and Washington Street to and through Egleston Square, Dorchester Avenue to and through Ashmont to Fields Corner, Centre Street from Jackson Square to Hyde Square and from Hyde Square to South Street, Blue Hill Avenue and River Street to and through Mattapan Square, and Harvard Street to and through Brookline Village.

A. Demographic Profiles

Population and Household Trends

Economic growth is closely tied to growth in population and households, who comprise the demand for goods and services in the area and a source of labor for area businesses. As shown in Figure E.1 below, Nubian Square compares very favorably with the comparison areas with regard to population size within a 0.75-mile radius of the center of each area.
More importantly, however, Nubian Square compares favorably with regard to projected rates of population growth, as shown below, in which Nubian Square’s projected growth rate over the next five years is 5.5%, while the average for all areas is 4.9%. Only Egleston and Hyde/Jackson Squares are expected to have higher growth rates.

The household is the other basic unit of consumption and labor (among many other things). Here as well Nubian Square exceeds the average, in both number and expected growth rates, as shown in Figures E.2 and E.3.
Households Sizes
With regard to household size, there is not a large variation across the areas, with Nubian Square area households being roughly on par with the average size.

Median Age and Generational Dispersion
Looking to future development, having a relatively young population is an advantage, and here as well, Nubian Square compares favorably, with the youngest median age of all the areas at 29 years. The average median for the six areas is 35.
If one considers the key demographic targets as Millennials and Generation Z, Nubian Square once again has an advantage, particularly with regard to Gen Z. These categories are roughly defined in Figure E.6 as ages 25 to 44 for Millennials and under 25 for Generation Z.

### Population Diversity

Another way to characterize the population of the areas compared is by language spoken at home. The following chart shows that English predominates in all the areas, with Spanish second in the Nubian Square area and on average; however, a substantial proportion of the population age five and over speaks an Indo-European language.
Household Income

Income is a key variable in assessing economic and other opportunities. Figure E.8 shows that Nubian Square households lag behind the other areas with regard to both average and median household incomes, no doubt correlating with the general youth of its population and households, among other factors.

Households within the Nubian Square walk-zone have the lowest median and second lowest average income of the six areas examined. The median is a better measure of relative incomes, as it represents the mid-point of the income range, with half of households having more income and half less. The average obscures often substantial inequalities among incomes.

Labor Force Characteristics

The education profile shown in Figure 11.09 shows that the Nubian Square area holds a slightly lower than average proportion of the population age 25 and older with a Bachelor’s degree or higher, but also has the second lowest share with less than a high school diploma with only Brookline Village lower.
Resident Occupational Characteristics

White collar employment is by far the most common type of employment for residents of all six areas, as shown in Figure E.10:

Well over half of the employed population of all areas except Ashmont-Fields Corner are categorized as white collar.

Travel times to work are all over 30 minutes, except for Nubian Square employees, whose average travel time is just 30 minutes, compared to employees from Mattapan Square, who spend almost 45 minutes getting to work, the longest of all six areas.
Additional support for these travel times is found in an examination of employees’ modes of travel to work, shown in Figure E.12. Fully 24% of Nubian Square employees walk to work or work at home, by far the largest proportion of all the areas except for Brookline Village, at 25%. Nubian Square and Brookline Village employees also had the two lowest shares of those who drive alone to work, 29% and 27%, respectively, compared to the average of 37% for all the areas. Public transportation is heavily used in all areas, with Nubian Square’s usage at 37% close to the average for all areas.

A substantial proportion of households have no vehicle at all. As Figure E.13 below shows, Nubian Square residents are least likely to own a vehicle, 46% compared to the areas’ average of 35%. Mattapan Square has the lowest proportion of households with no vehicle, which tracks with residents’ propensity to drive alone to work, shown in Figure E.12.
**B. Housing Profiles**

**Housing Supply**

Figure E.14 below displays the areas by total number of housing units. The Hyde-Jackson Square area has the most units, followed closely by Nubian Square and Brookline Village.

**Figure E.14: Total Housing Units (2019)**

**Housing Tenure Type and Duration**

Nubian Square households have the strongest propensity to rent of all the areas: 79% are renters compared to the average of 68%. Mattapan Square has the highest proportion of owner-occupants, as shown in Figure E.15.
Lengths of residents usually differ for owners and renters, with owners tending to remain in their homes longer than tenants, and that is the case in all areas looked at. Nubian Square households, both owners and renters, have lengths of residence about equal to the average, as Figure E.16 shows.

Home Values
For those occupants who do own their homes, however, home values in the Nubian Square area are slightly higher than average for the six areas: $606,000 compared to $566,000. Only Brookline Village values are higher.
Age of Housing Stock
The age of the housing stock is often related to average values. The chart below shows that Nubian Square has the second largest share of units in structures built in the year 2000 or later. Brookline Village has the smallest. Note, however, that these proportions include rental units as well as owner-occupied units.

C. Business Profiles
Major Business Sectors
The following three tables present a broad-brush view of all commercial activity in Nubian Square and each of the comparison areas. Table 1 compares numbers of establishments, the second numbers of employees, and the third sales. At this two-digit NAICS level, not much beyond general observations can be made. For example, in Nubian Square and Brookline Village, the Healthcare and Social Assistance sector leads all others in establishments, employment, and sales. In Nubian Square, the great majority of businesses in this sector are ambulatory care, although hospitals employ more people and bring in larger sales. In Brookline Village, hospitals and ambulatory care are the biggest employers, but ambulatory care generates far more sales. A second key sector in all areas is Other Services, which includes such things as repair and maintenance, personal services, and religious institutions.

In Nubian Square, the largest employers, after Healthcare are Educational Services and Public Administration. These large employment sectors are important for the resources, human and financial, that they bring to the Square.
The retail sector is important to all areas. It is the second largest employer in Ashmont-Fields Corner, Hyde Square/Jackson Square, Mattapan Square, and Brookline Village and generates the largest sales in Mattapan Square.

Source: Environment Analytics, Spotlight Reports, 2019, and PPI Subsector.
Retail Sector Details

The following sections will examine key sectors more closely. These sectors, besides Retail Trade, include Arts, Entertainment, and Recreation, Accommodation and Food Services, and Other Services. These sectors offer the kinds of goods and services that offer potential to enliven and activate under-used parts of the Square and are areas that residents have expressed a desire to see more of in the Square.

The first set of charts compares the Retail Trade sector in each area by number of establishments, employment, and sales. Nubian Square has fewer retail establishments than the average. Mattapan Square has the fewest, Ashmont-Fields Corner the most.
A similar pattern holds for total retail employment, with Ashmont-Fields Corner and Egleston having the largest numbers of employees, Mattapan Square the fewest, and Nubian Square well below the average.
Total retail sales follow a similar distribution, with Nubian Square the second lowest:

**Figure E.24: Total Retail Sales in US$ (2019)**

Arts, Entertainment, and Recreation Sector Detail
Arts, Entertainment, and Recreation are not large sectors, but they are important to keeping the Square active during non-work hours and days. Nubian Square has fewer than average establishments in this sector, with Egleston having the most and Mattapan Square the fewest.

**Figure E.25: Number of Arts, Entertainment and Recreation Establishments (2019)**

Nubian Square’s employment in this sector also lags the average but is still the third highest of the six areas, behind Ashmont-Fields Corner and Egleston.
Sales in this sector in Nubian Square exceed the average, but not by a large margin. Here again, Ashmont-Fields Corner and Egleston Square are the leaders with Nubian Square ranking third.

**Figure E.26: Number of Arts, Entertainment, and Recreation Jobs (2019)**

Accommodation and Food Services Sector Detail
Accommodation and Food Services provide activity during work and non-work hours and are a key component of a vibrant center. Nubian Square has slightly fewer establishments than the average, with the third lowest number. Egleston Square has the most.
Figure E.28: Number of Accommodation and Food Services Establishments (2019)

Figure E.29, employment in this sector, displays similar trends across the geographies.

Figure E.29: Number of Accommodation and Food Services Jobs (2019)

Sales in this sector are by far the highest in Ashmont-Fields Corner. Brookline Village is second, and Nubian Square is third, but exceeds the average.
Other Services Sector Detail

Finally, Other Services cover are defined in the NAICS system as follows: Establishments in this sector are primarily engaged in activities such as equipment and machinery repairing, promoting or administering religious activities, grantmaking, advocacy, and providing dry cleaning and laundry services, personal care services, death care services, pet care services, photofinishing services, temporary parking services, and dating services. Private households that engage in employing workers on or about the premises in activities primarily concerned with the operation of the household are included in this sector.

This sector would cover the kinds of small, independent businesses that could be valuable additions to the Nubian Square residential and business community. Nubian Square currently ranks third among the six areas with regard to numbers of establishments engaged in these activities.

In employment, however, Nubian Square ranks second from the bottom.
In business sales for Other Services, Nubian Square is below the average for the areas. Egleston Square is the clear leader by this measure, as shown in Figure E.33.

**Office Using Sector Detail**
Office-using businesses are of interest as they fuel upper floor occupancy and generate employee spending. The market for office space in Boston is, however, highly competitive, with a wealth of newly-built facilities offering amenities which are difficult to build or renovate at the rents that can be achieved in Nubian Square (see the real estate analysis that follows).

For purposes of this analysis, these businesses are defined as NAICS codes 51 through 56: Information, Finance and Insurance, Real Estate and Rental and Leasing, Professional and Technical Services, Management of Companies and Enterprises, and Administrative and Support.

In number of establishments, Nubian Square is below the comparison areas’ average.
In employment, however, Nubian Square with its concentration of large public and nonprofit establishments, exceeds the average and is second only to Egleston Square.

Similarly, Nubian Square office using businesses generate sales that exceed the average and are exceeded only by those in Ashmont-Fields Corner.
Household Spending and Business Sales Comparisons

Existing household spending patterns in the Nubian Square area are compared to spending patterns in the other areas below. The first chart shows total retail spending, including food and drink sales, but excluding motor vehicle related spending and non-store retail spending, since these latter categories do not support a vibrant community retail scene. The per household spending is shown against total business sales, which would include some sales to households from outside the areas. City of Boston figures are included for an additional point of comparison.

Nubian Square households exceed the average in per household sales by businesses in the area, but per household spending is slightly less than the average.
Appendix F: Comparative Analysis: Analogous Submarkets

A. Retail Market Real Estate Market Profiles

Metro Boston Retail Market Overview

According to data compiled and analyzed by the CoStar Group, the Metro Boston retail market supports over 236 million square feet of space with another 5M SF of inventory expected for delivery in the next five years.

The most recent Q4 report published by CoStar states that “…Despite retail’s challenges across the country, Boston’s retail market has historically enjoyed relatively strong performance. Incomes are approximately 45% higher than the US overall and continue to grow at an outsized rate as a result of strong job growth in high paying medical and technology fields. Boston is also an under supplied retail market and has a notably lower retail per square footage per capita than many other metros (approximately 49/SF per capita).

Development has typically been subdued compared to its history, but new projects have open across the metro and leased well. Projects like WS Development’s Seaport Square to Federal Realty Trust’s Assembly Row have complemented office and multifamily inventory with attractive retail tenants, pulling demand both locally and from shoppers across the metro. Other bold mixed-use developments are attempting to replicate the successes of the previously mentioned projects. Boston Properties Hub on Causeway and its 200,000 square feet of urban retail recently wrapped up in North Station and the 400,000 SF Arsenal Yards Redevelopment in Watertown is now fully underway. These mixed-use projects have flipped the dynamics of the retail market, once dominated by a select few areas such as Back Bay’s Newbury Street.

Still, the strongest performance may be in the past. Rent growth in the third quarter of 2019 fell into the red for the first time this expansion. Vacancies, while still below the US rate, have flattened and are even slightly up from their trough in 2017. Store closures may play a role. More than a 1.3 million SF of store closures were announced in greater Boston in 2018, up from 450,000 SF in 2017. Already in 2019, another 500,000 SF of closures have been announced from the likes of Payless Shoe Stores and Shaw’s Supermarket.

For well-located shopping centers, this trend will likely only be a blip and may even give landlords a chance to bring in new and innovative retailers. But this phenomenon could pose a challenge for aging urban and suburban centers.

Perhaps indicative of investor views of retail nationwide, sales volume has begun to slow in Boston. Volume in 2018 closed below that of 2017 and was more than 18% below that of its cyclical peak in 2016. The same slowdown in sales volume has been evidenced in multifamily and office as well, so declining sales volume may also be due to reinvestment risk. Selling typically means redeploying capital into another asset, which can be challenging with prices as expensive as they are in Boston.”

Roxbury-Dorchester Retail Submarket Overview

According to stats from CoStar for Q3 2019, rents in the Roxbury-Dorchester retail market currently hover at just below $25 PSF with vacancies well below the metro average and other Boston City neighborhood submarkets.

The general retail format dominates in this market (independents and free-standing retailers), with power centers like South Bay and neighborhood centers like Grove Hall (most anchored by grocery and other regional and national chain tenants) rounding out the mix.

Retail Submarket Market Comparisons
The Roxbury-Dorchester submarket (>5.5M SF) supports the largest inventory of retail space among the submarkets examined by this study, followed by Brookline (<5.5M SF), JP-South Suffolk (>3.5M SF), the LMA-Fenway (>1.5M SF) and the South End (<1.5M SF).

The Roxbury-Dorchester market scale at over 5.5M SF, reflects the diffuse nature of the retail inventory throughout the urban markets and much of the existing space must be characterized as older and in need of modernization. Low rents, as will be discussed in the following section of this report, have clearly been a boon to occupancy, however, they also signal low sales volumes and potential weakness in underlying demand.
Retail Submarket Rents and Growth Rates

The analysis shows retail rents in the Roxbury-Dorchester submarket at just under $25 PSF, to be on par with the Metro Boston average, but among the lowest of Analogous Submarkets studied. Only Jamaica Plain and the neighborhoods to the South are lower. The highest performing submarket is LMA-Mission Hill-Fenway, where the demand from entertainment visitation, healthcare and life sciences employees and tremendous residential density is generating the sales volumes needed to support higher rents.

As the leasing data discussed later will illustrate, retail rents for new spaces are now routinely over $50 per SF (NNN) in places like the Fenway (some rents here are approaching $100 PSF). For locations like Nubian Square, low sales volumes, poor space quality and the lack of coordinated management and marketing, must be addressed before aspirations for future retail improvements in the district can become a reality.

Retail market rents have been stable to declining market-wide since 2014, a function of broad trends in brick and mortar retail outlets. As illustrated below, the retail markets all boomed in 2014 but no district was unscathed.
during the 2009 Great Recession. Forecasts for the next five years portend small rent increases - in the 0.5% per year realm.

Retail Sales Volumes (Imputed)
Retail market rents provide a benchmark for sales performance in the submarkets under study, as many retailers calibrate supportable rent as a function of gross sales – generally in the 6% to 8% of sales range. Assuming a typical occupancy ratio of 7% the following sales indications for the submarkets are generated.

Note that Roxbury-Dorchester’s imputed sales volumes PSF while generally consistent with the metro-Boston market average, are among the lowest of submarkets studied.
Retail Submarket Vacancy Rates

Retail vacancies in all the submarkets under study here have been generally under 5% since 2010, with rates for Roxbury-Dorchester tracking among the lowest, no doubt rents are low.

Retail Submarket Absorption and Deliveries

As indicated by the tables that follow, retail absorption in all the submarkets under study has generally tracked with supply deliveries and notable tenant or market disruption.
Nubian Square Retail Profile (0.75-Mile Radius)

As indicated by the CoStar summary below, the Nubian Square walk-zone (0.75-mile radius) supports roughly 868,000 SF of retail space and hasn’t changed appreciably in nearly two decades. Vacancy is now at the lowest point in over 10 years (excludes shadow vacancy not currently on the market) with average rents above $22.50 PSF (NNN).

Nubian Square Retail Leasing Activity

As indicated by the CoStar summary below, which reflects 40 leases undertaken in Nubian Square properties in the past 10 years, with a few notable exceptions, rents have generally been in the low to mid-$20’s most with concessions (2-3 months free), most deals have been small (under 2,000 SF), and most have reflected terms of 5 years in duration.

Nubian Square Market Analysis  February 2020

Jackson Square to Hyde Square (Centre Street) Retail Leasing Activity

As indicated by the CoStar summary below, which reflects 17 deals undertaken in Jackson-Hyde Square properties over the past 10 years, with a few notable exceptions, rents have generally been in the mid-$20’s, most with concessions (1-2 months free), most deals have been very small (under 1,500 SF), and most have reflected terms of 3 to 5 years in duration.

**B. Commercial Office Real Estate Market Profiles**

**Metro Boston Office Market Overview**

According to data compiled and analyzed by the CoStar Group, the Metro Boston office market supports over 346 million square feet of space with another 23M SF of inventory expected for delivery in the next five years. The most recent Q4 report published by CoStar states that “...overall performance is strong, driven by rapidly expanding tech and biotech firms, being drawn to large blocks of space in the CBD, the Seaport, Cambridge, North Allston, and suburban markets such as Somerville, Waltham and Watertown, where the quality of environment needed for employee retention and recruitment can be accommodated.

Despite strong current conditions, warnings signs have begun to emerge. Net absorption has been historically tepid in 2019, even turning negative in the third quarter. This comes after essentially unabated positive absorption this cycle. The forecast calls for strong positive absorption in the next several quarters, meaning slow recent absorption may be a blip but is still a trend worth noting. The struggles of coworking giant WeWork also looms over fundamentals. The firm leases more than 1.5 million square feet in greater Boston, including 2.6% and 1.6% of the entire inventory of Back Bay and the Financial District respectively. While Boston doesn’t nearly have the same
exposure as other major metros like New York or San Francisco, a slowdown in leasing, or even give backs of space, could be a headwind to current conditions.

While rent growth is down from early cycle highs, gains continue at a consistent pace in response to tight vacancies. Due to their particular scarcity, upper floors and large blocks of space in the urban core have reportedly seen the biggest rent increases. Other changes have emerged in the rental landscape in response to low vacancy rates.

In the City of Boston, quoted triple-net rents have reportedly become the norm, as have percentage bumps above 2%. While rents are likely to continue their rise in the near term, Boston is a tech-heavy economy, and rent declines during economic slowdowns are typically sharper than in other markets.

On the supply side, deliveries for the next several quarters are expected to be minimal, aiding the near-term vacancy forecast. However, a supply threat looms in 2021 and beyond. Millions of square feet have broken ground in 2019, including three towers in the CBD alone, meaning the market’s supply peak has likely yet to hit the metro. While much of the space underway is already committed, risks may come from backfill space when the economic outlook may be murkier than it is today.”

Roxbury-Dorchester Office Submarket Overview
According to stats from CoStar for Q3 2019, rents in the Roxbury-Dorchester office market currently hover just above $30 PSF with vacancies well below the metro average in this cycle, primarily due to limited supply and a number of owner-occupied buildings.

Several of the largest office buildings here are owned by the city, including the 220,000-SF 1010 Massachusetts Ave. and the 215,000-SF Nubian Square Municipal Center. The Nubian Square Municipal Center is the only substantial supply addition this cycle, and little delivered the previous cycle. Many of the largest lessees of space are typically nonprofits or smaller, local firms that typically don’t take large blocks of space. Therefore, vacancies have changed only marginally since 2015.
Office Submarket Market Comparisons
The Boston neighborhood office submarkets, notably Roxbury-Dorchester (<4.0M SF), JP (<1.0M SF) and the South End (<4.0M SF) markets under study here, are very small by comparison to the prime CBD, Seaport and Back Bay institutional submarkets and have historically been unable to compete for a meaningful share of Metro-Boston’s growing office demand. Conversely, note that the size of the LMA/Fenway and Brookline (especially Chestnut Hill) submarkets (both supporting over 8.0M SF), reflect their historic appeal to fast growing healthcare and life sciences sectors.

Office Submarket Rents and Growth Rates
The analysis shows office rents in the Roxbury-Dorchester submarket to be among the lowest of Analogous Districts studied, with current rents at just over $30 PSF (only JP and the neighborhoods to the South are lower. The highest performing submarket is LMA-Mission Hill-Fenway, where the competition among healthcare and life sciences users is bidding up prices to well over $50 PSF. Note that rents above $50 are now necessary to support the cost of new Class A office construction. For locations like Nubian Square, this underscores the importance of economic development policy commitments such as those reflected by the Boling Building to aspirations for future office growth in the district.

Office Rent Trends 1999-2024
The commercial markets are highly cyclical and tend to be especially sensitive to external economic shock. As illustrated below, the office markets all boomed in 1999 and 2014 but no district was unscathed during the 2009 Great Recession. Forecasts for the next five years portend small rent declines—in the 1% per year realm.

### Office Submarket Vacancy Rates

Office vacancies in all the submarkets under study here have been generally under 10% since 2010, with rates for Roxbury-Dorchester tracking among the lowest, no doubt because the public occupancies that dominate the tenant mix are highly stable and not prone to market risk or disruption.

### Office Submarket Absorption and Deliveries

As indicated by the tables that follow, office absorption in all the submarkets under study has generally tracked with supply deliveries and notable tenant or market disruption.
Nubian Square Office Leasing Activity
As indicated by the CoStar summary below, which reflects 50 deals undertaken in Nubian Square properties over the past 10 years, with a few notable exceptions, rents have generally been in the high $20’s to low $30’s PSF, most with concessions (1 to 2 months free), most deals have been small (under 5,000 SF), and most have reflected terms under 5 years in duration.

Appendix G: Retail Opportunity Gap Analysis

The retail opportunity gap analysis is a tool used by major retailers and chain restaurants to gauge market demand and competition within a specified geographic area. It presents a snapshot of the current consumer spending on various retail categories within a specified geographic area alongside actual retail store sales in those same categories within the same geographic area. Where expenditures by households in the market area exceed sales in that market area, a gap or opportunity exists for new or existing stores within the market area to “capture” more of those household expenditures. (This loss of potential sales is also called “leakage”.) Conversely, where market area household expenditures are less than actual sales for a category, it indicates that stores in that category already attract consumer dollars from outside the market area and the opportunity to draw more retail activity may be more limited, or may require greater effort.

The analysis is predicated on the idea that that people will typically purchase goods and services within the shortest available walking or drive time from where they live. The principle applies to comparable and competitive goods, services, and pricing: there is no guarantee of success based strictly on location advantage, which simply presents the opportunity.

Retailers typically define market areas in terms of drive times, with a 15-minute drive time considered the maximum time consumers would be willing to drive for all but the largest stores and store types. In the case of Nubian Square, however, the Study Team concluded that a much smaller market area was appropriate, given the nature of the (mostly small) businesses in the Square, the density of population in the area, and the proximity of other comparable market areas. An area described by circles with 0.75-mile and 1.5 mile radii capture the Square’s business activities. The 0.75-mile radius is also the well-recognized customer walk zone, while 1.5 miles represents a secondary, but still important local market area for residents traveling for goods and services by car or transit.

To provide a context for the potential of this sector, the table below shows the total population, number of employees, retail expenditures for both residents and employees (demand), retail sales (supply), and the total gap within .75 miles and 1.5 miles of the center of Nubian Square, for which the team used the Bolling Building at 2300 Washington Street.

As indicated by the table that follows, aggregate retail demand exceeds aggregate business sales by a relatively small amount within the 0.75-mile radius, suggesting some opportunity for new or expanded business activity but at 1.5 miles, residents are clearly buying less than local businesses are selling, indicating that businesses are attracting customers from outside the area.

Figure G.1: Nubian Square Retail Market Areas

<tr>
<td>Total Opportunity Gap</td>
</tr>
</tbody>
</table>
However, the totals mask variations at the sector level. Indeed, there are several sectors in which the resident population is spending some of their retail dollars outside the market areas, signaling opportunities for several business categories to draw more spending back into the area.

Data in the following table summarize FXM’s analysis of those sectors in which current consumer expenditures (demand) exceed actual store sales (supply) within the local retail market areas in 2019 and projected to 2024. The analysis shows where the gaps between supply and demand are sufficiently large to indicate an opportunity to capture sales leakages, either through better sales performance in existing stores, location of new stores or expansion of existing businesses. The market areas for these sectors are most likely to be within a 1.5-mile radius of the Square. The final column in the 2019 table shows estimated annual growth rates for the retail categories over the next five years.

If about a quarter of the total leaked expenditure potential or “opportunity gap” were deployed to support new square footage, between 78,560 and 148,520 square feet of additional business activity could potentially be borne by 2019 resident and employee spending within a 1.5-mile radius of Nubian Square.

The number of stores would be between 17 and 31. By 2024, the additional square footage would range from 87,000 square feet to 163,000 square feet, or from 20 to 34 stores. It is important to emphasize that these analyses are based on broad industry averages of sales, store sizes, and estimates of spending and are only indicative of potential. Actual business success depends on many other factors besides demand. The numbers suggest sectors in which Dudley businesses might find opportunities to do better and advocates for new additions to the Square might search for interest.

Those sectors include: furniture and floor coverings, hardware, garden centers, small grocery and meat markets, health and personal care, hobbies and toys, gifts and novelties, and limited service restaurants and buffets.

Understand that the gap analyses do NOT mean there is no opportunity for growth or improvement outside of these sectors, simply that these offer an evidence based understanding of what is missing from the area from a consumer perspective. Also understand that the presence of a “gap” is no guarantee, the analysis provides a picture of current business opportunity - for existing retailers to do better by capture a greater share of customer purchases in existing stores and for new retailers to locate or expand facilities to take advantage of unmet customer demand.

A successful revitalization plan for Nubian Square must include strategies for business retention and improved profitability for those that have already made a bet on Dudley as well as signaling that Dudley is a place to do business for new enterprises that may be seeking opportunities to innovate, expand or relocate.

Endnotes

2 For this analysis, people of Hispanic or Latinx origin are counted as a separate group regardless of race.

8 The Building Owners and Managers Association (BOMA) defines three classes of office space: A, B, and C: Class A: Most prestigious buildings competing for premier office users with rents above average for the area. Buildings have high quality standard finishes, state of the art systems, exceptional accessibility and a definite market presence. Class B: Buildings competing for a wide range of users with rents in the average range for the area. Building finishes are fair to good for the area and systems are adequate, but the building does not compete with Class A at the same price. Class C: Buildings competing for tenants requiring functional space at rents below the average for the area.

19 Most prestigious buildings competing for premier office users with rents above average for the area. Buildings have high-quality standard finishes, state of the art systems, exceptional accessibility, and a definite market presence.

20 Clusters are groups of closely related and interconnected businesses that operate within a specific geography and benefit from their geographic proximity.

24 The white, black, Asian and Other race/ethnicity categories do not exclude people of Hispanic or Latino origin. All people of Hispanic or Latino origin are included in the Hispanic or Latino category. “Other” includes American Indian and Alaska Native, Native Hawaiian and Other Pacific Islander, some other race alone, or two or more races. “Less than high school diploma” is the share of the population 25 years and over with less than a high school diploma (or equivalent) as the highest level of education attained. “High school diploma only” is the share of the population 25 years and over with a high school diploma as the highest level of education attained. ESRI income data for 2019 are in 2019 dollars. ESRI income projections are in 2024 dollars and, therefore, include projected inflation between 2019 and 2024. Average household disposable income is net income available after income taxes. Average household discretionary income is the average disposable household income minus income spent on essential purchases. **Sources:** Boston Housing Authority; ICIC analysis of Claritas Pop-Facts Premier – 2019 Current Year Estimates, Nubian Square Residential Projects, ESRI Community Profile (Nubian Square), ESRI Detailed Age Profile (Nubian Square), ESRI Disposable Income Profile (Nubian Square), and ESRI Retail Demand Outlook (Nubian Square) data.
